Annual Report 2021

Contents

Comments by the President and CEO

Morten Thorsrud

Stability is key – also in challenging times

Our purpose at If is: “We give people confidence today to shape their tomorrow”. This is the most important thing we do. It enables our customers to purchase a house or a new car, start a business, get healthcare, or plan their dream vacation. Because in any situation that life might bring, we are by their side, providing security and help when needed.

2021 was undoubtedly yet another challenging year. The Covid-19 pandemic continued to have a strong impact both on our society and in our lives. It also impacted our ways of working at If. After the significant changes experienced in 2020, when most of the year was spent working from home offices, 2021 turned out to be yet another year in which it was a challenge to meet face-to-face. Our employees spent much of the year working remotely, which of course has been tiring. We are therefore even more grateful and proud that we, despite these challenges, were able to further develop our business and live up to our promise. We remained by our customers’ sides.

In fact, 2021 was also a year in which we experienced a strong positive development on most customer metrics. We noted increased retention rates that reached record-high levels and reported an annual growth rate of 4.3%, with strong growth in all business areas. Customer satisfaction remained at a very high level, and we received numerous awards, including for our customer service, products and partnerships.

We continued to help our customers when they needed us the most. We processed more than two million claims during the year. Compared to 2020, we saw an increase in the number of claims related to motor and personal injury products. Travel claims remained at a lower level than normal, although we noted an increase towards the end of the year.

The rate of digital development progressed at an even higher pace. We noted that our customers were increasingly using our online services, and while we have always invested considerably in the digital area at If, these increased even further in 2021. For example, we improved our solutions for online claims reporting, payments and self-service offerings. Digital development will continue to be a top priority in the years to come.

Something we are particularly proud of in the past year is that we have integrated environmental impact and human rights in our insurance terms. We expect our corporate clients to act in a sustainable manner, and to comply with the UN Global Compact principles, which include fundamental human rights, labor rights, environment, and anti-corruption. If is the largest P&C insurance company in the Nordics and we are proud to take the lead and define the sustainability agenda in our industry. In parallel, we are setting ambitious climate targets for our own operations. By committing to the Science Based Targets initiative, we will contribute to the aim of limiting global warming in line with the Paris Agreement. As a frontrunner in the insurance industry in terms of taking such steps, we hope to set an example that others will follow.

Financially, 2021 was another solid year for If. Our investment results improved and the total investment return amounted to 4.3%. Our combined ratio was a strong 81.3% and the technical result totaled MSEK 9,155.

We are now ready to face a new normal. As an employer, we have already implemented a more flexible work model and are adapting our offices to this. As a large company, we will continue to work towards our ambition of actively contributing to a more sustainable society. As an insurer, we can see that the pandemic has changed insurance needs, especially in such areas as travel and mobility. We are ready to adapt, improve further, and address new risks. We are well prepared for what tomorrow may bring.

We are by your side.

Morten Thorsrud, President and CEO

In February 2022, Russia launched a terrible attack on Ukraine. In war, the rules of play change in all areas of society, unfortunately also for our business. It is impossible to make promises of safety in such situations, but we try to contribute where we can. Our hearts go out to the people of Ukraine.

Board of Directors' Report

The Board of Directors and the President of If P&C Insurance Holding Ltd (publ), corporate registration number 556241-7559, hereby issue their annual report and consolidated financial statements for the 2021 fiscal year.

Organization

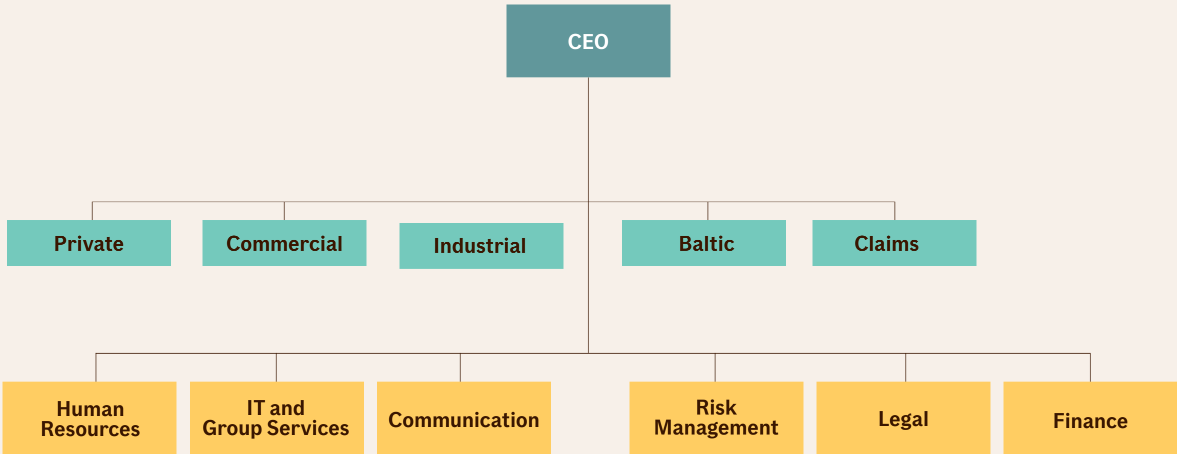
If is a Nordic Group that also conducts insurance operations in the Baltic countries. The Group's headquarters is located in Solna, Sweden.

The Parent Company of the If Group, If P&C Insurance Holding Ltd (publ), is a wholly owned subsidiary of Sampo plc, a Finnish listed company, whose registered office is in Helsinki.

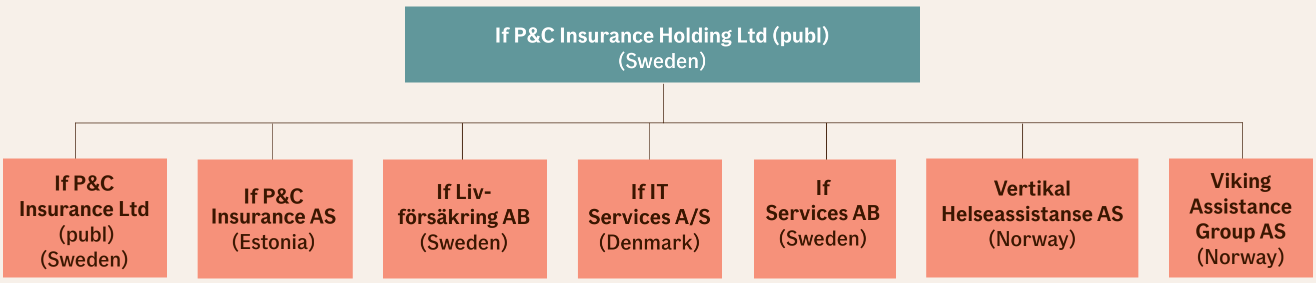
The main role of If P&C Insurance Holding Ltd (publ) is to manage shares in wholly owned property and casualty insurance operations as well as other significant holdings. The holding company owns the Swedish companies If P&C Insurance Ltd (publ), If Services AB and If Livförsäkring AB, the Danish company If IT Services A/S, the Norwegian companies Vertikal Helseassistanse AS and Viking Assistance Group AS and the Estonian company If P&C Insurance AS. If's insurance operations in Denmark, Norway and Finland and to some extent Estonia and Latvia, are conducted via branches of If P&C Insurance Ltd (publ) in each country. In addition, If P&C Insurance Ltd (publ) has branch offices in France, the Netherlands, the UK and Germany to support customers with international operations. The Estonian company If P&C Insurance AS also conducts operations in Latvia and Lithuania via branches.

The insurance operation in the Nordic region is organizationally divided in accordance with customer segments into the business areas Private, Commercial and Industrial. From January 2021, claims management was merged into one Nordic unit. Insurance operations in the Baltic countries are organized in one business area, Baltic. Support functions such as Human Resources, IT and Group Services, Communication, Risk Management, Legal and Finance are organized as a support to the business.

Operational structure



Legal structure



Significant events and effects during the year and after the balance sheet date

2021 was a year marked by continued challenges due to the Covid-19 pandemic. Priority was given to business continuity and continued service and support to If's customers, while many of the employees have worked from home offices during a large part of the year. The pandemic's impact on If's results decreased in 2021 following the rollout of mass vaccinations and eased pandemic restrictions allowing for greater mobility. Compared to 2020, there was an increase in Motor claims frequencies as traffic returned to more normal levels. Travel claims remained at a lower level than normal, although increased during the latter part of the year. The effect of Covid-19 on the combined ratio was a reduction of approximately 2 percentage points (3).

In February 2022, Russia attacked Ukraine, which has dramatically changed the political situation in Europe and contributed to significant uncertainty in financial markets. If has implemented decided sanctions and follows the development of events closely. Affected insurance exposure is assessed to be low and the financial turbulence can be handled with a continued good solvency situation.

Earnings and financial position

Results

The technical result for insurance operations increased to MSEK 9,155 (8,502) and the combined ratio improved to 81.3% (82.1). The investment result increased to MSEK 2,371 (1,529). Profit before tax for the year amounted to MSEK 10,923 (9,451).

Premiums

Gross written premiums amounted to MSEK 52,089 (50,582). Adjusted for currency effects, the increase was 4.3% (4,7), supported by an increasing degree of renewal among existing customers, a growing customer base and premium adjustments. All business areas show good growth.

Net premiums earned amounted to MSEK 48,418 (47,028).

Claims and claims reserves

Claims incurred, net of reinsurance, amounted to MSEK 31,717 (31,204). The risk ratio was 59.9% (60.7), including an adverse but slightly lower large claims result compared with last year and a 3.6 percentage points (4.2) positive impact of prior year's development.

At year end, gross claims reserves amounted to MSEK 68,422 (66,130). Adjusted for currency effects, gross claims reserves increased by MSEK 514 compared with the preceding year. The change during the year was primarily attributable to a reserve reduction in motor third-party liability (MTPL) insurance and a reserve increase in property insurance.

Reinsurers' share of claims provision amounted to MSEK 2,581 (2,255). Adjusted for currency effects, the increase during the year was MSEK 157 MSEK.

Expenses

Operating expenses in insurance operations, net of reinsurance, amounted to MSEK 7,662 MSEK (7,416). Adjusted for currency effects, the increase was 4.2% (3.1). The cost ratio improved to 21.4% (21.5).

Investment result and asset allocation

At full market value, profit from asset management increased to MSEK 4,999 (2,548), driven by a strong year for equity investments and high-yield corporate bonds. Total return was 4.3% (2.3). Net investment return amounted to MSEK 2,371 (1,529) in the income statement and MSEK 2,628 (1,019) in other comprehensive income.

Asset allocation remained fairly stable. Fixed income comprises 86% (89) and equities 14% (11) of the total investment assets. At year end, the duration of the fixed income assets was 1.1 (1.4).

[1)] Refers to alternative performance measurements which are defined in Glossary and definitions.

Tax expense and net profit

The effective tax rate for the year was 21.1% (21.6). The decrease was primarily attributable to a lower nominal tax rate in Sweden. Of total taxes, current tax expense accounted for MSEK 2,296 (2,053) and deferred tax expense for MSEK 8 (income 7).

Net profit for the year was MSEK 8,618 (7,405).

Results per business area

Information concerning operations and the earnings trend in the Group's business areas is presented in Note 6.

Solvency and cash flow

Insurance is a regulated business with EU-wide rules for calculating capital requirements and available capital. All If's insurance subsidiaries have regulatory solvency capital requirements (SCR) and have fulfilled those during the fiscal year. If P&C Insurance Ltd (publ) uses an approved partial internal model (PIM) to calculate the SCR for insurance risk, while other risks are calculated using the standard formula. If Livförsäkring AB and If P&C Insurance AS (Estonia) use the standard formula for calculating SCR.

As a subsidiary of Sampo plc, If P&C Insurance Holding Ltd (publ) is a member of the Sampo insurance Group and is not subject to a formal requirement to report its sub-group solvency position. The consolidation capital calculated according to the Swedish Financial Supervisory Authority's general recommendations amounted to MSEK 42,352 (37,568).

Cash flow from operating activities, including net investments in financial investments assets, amounted to MSEK 9,525 (8,292). A dividend of MSEK 6,500 (6,300) was paid and subordinated loans were repaid, net by MSEK 1,636 (-).

Personnel

The numbers of employees increased during the year and amounted to 7,287, (7,120) at year-end. The average number of employees during the year was 7,223 (7,182), of whom 53% (54) were women.

During the year, If recruited approximately 1,100 employees (900) in order to replace people who had retired or left the company and to add new competencies to the organization.

The principles applied for determining remuneration to senior executives are presented in Note 12.

Outlook

The development of the global economy is difficult to predict as uncertainty remains about the next phase of the pandemic. Despite this, the underlying profitability of the insurance operation is expected to remain solid. A key success factor is continued accuracy in pricing insurance contracts, while ongoing efficiency improvements are important for long-term profitability.

For 2022, the financial target for the Group is to reach a combined ratio below 85%.

Applied accounting policies

If P&C Insurance Holding Ltd (publ) has prepared the consolidated accounts in accordance with international accounting standards (IFRS Standards, IAS Standards, SIC Interpretations and IFRIC Interpretations), as adopted by the European Union. For the 2021 fiscal year, there were no new or amended standards that caused any significant changes or new requirements for the Group.

Objectives and policies for financial risk management

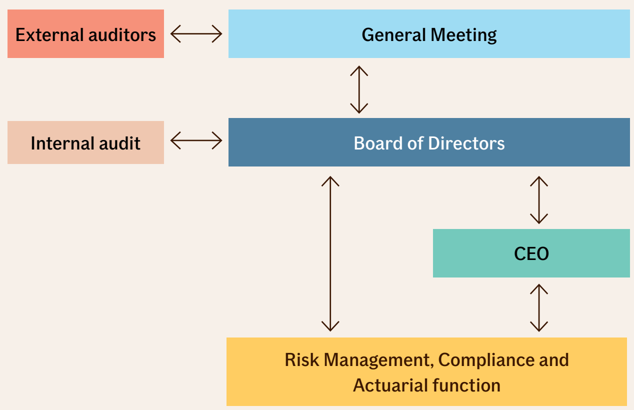
The core of the Group's insurance operations is the transfer of risk from the insured clients to the insurer. If's result depends on both the underwriting result and the return on investment assets.

The main objectives of If's risk management are to ensure a sufficient return for the risks taken and that risks are taken into account in pricing decisions and other business decisions.

This requires risks to be properly identified and monitored. The risks, exposures and risk management are described in Note 5.

Corporate Governance Statement

Governance structure



If P&C Insurance Holding Ltd (publ) is not listed and does not comply with the Swedish Corporate Governance Code. However, the company has subordinated loans listed for trading on the Luxembourg Stock Exchange (BdL Market). According to the Swedish Annual Accounts Act (1995:1554), there are requirements stipulating that such companies shall submit a limited Corporate Governance Statement. The company has decided to allow the Corporate Governance Statement to be part of the Board of Directors' Report.

As mentioned earlier, the company is a wholly owned subsidiary of the listed Finnish company Sampo plc. The shareholder's right to participate in company decisions is exercised at the Annual General Meeting and at Extraordinary General Meetings.

The Articles of Association, which is the fundamental control document for the company, states, inter alia, the object of the company's operations, the size of the share capital, the number of members of the Board of Directors and auditors, as well as the period for such assignments, matters that shall be addressed at the Annual General Meeting and how notice convening the General Meetings shall be sent out. According to the Articles of Association, the Board of Directors shall comprise of no fewer than three and not more than five elected members, and the election shall apply for the period until the end of the Annual General Meeting taking place the year after the member was elected. The Articles of Association contain no stipulations pertaining to amendments of the Articles of Association. The company has issued two series of shares, Series A-shares and Series B-shares. Series A shares carry one vote each and Series B shares carry one tenth of a vote each. The shareholder or the shareholder's representative is entitled to vote for the full number of shares represented, with no restrictions on voting entitlement. No General Meeting has granted any authorization to the Board of Directors to make decisions that the company shall issue new shares or acquire own shares.

The Board of Directors is ultimately responsible for ensuring that there are efficient systems for follow-up and control of the company's business and financial position. The central finance and accounting department is responsible in part for control systems, control, accounting and reporting in accordance with generally accepted accounting principles, and in part for liquidity, funding and capital. The work with internal control of financial reporting is based on If's Internal Control Policy, which is based on the framework established by the Committee of Sponsoring Organisations of the Treadway Commission, COSO. The aim is to exclude material errors in the financial reports. The control environment includes aspects such as the organizational structure, roles and responsibilities, integrity-steering documents, ethical values and the competence of If's employees. Control activities consist of steering documents, approval procedures, routine descriptions and controls to manage the identified risks. Implemented controls include such activities as authorization rules and referrals according to appropriate rules, for instance the four-eyes principle.

The compliance function is responsible for advising the Board and the CEO regarding compliance with the rules that are related to If's permit to conduct insurance operations. The compliance function also evaluates the measures taken to prevent non-compliance. Furthermore, the compliance function assesses any consequences of rule changes that affect the business and identifies and assesses risks of non-compliance. A risk-based compliance plan is produced annually and adopted by the Board.

The compliance function is operationally independent. The Chief Compliance Officer (CCO) is appointed by the CEO and has the overall responsibility for the function and its areas of responsibility. The Board issues an instruction to the CCO, which describes its tasks in more detail. The CCO reports directly to the company's Board and CEO.

The actuarial function is led by the Chief Actuary and reports to the Board and to the CEO. The main tasks of the actuarial function are to coordinate the calculation of technical provisions and ensure its reliability and adequacy, to comment on the underwriting policy, on whether the reinsurance arrangements are sufficient and on the solvency position and to contribute to the risk management system, including through the ORCA process.

The risk management function is led by the Chief Risk Officer (CRO). The function consists of a risk control unit and a capital management unit and has the task of supporting the implementation and development of the risk management system. The risk management function reports to the Board and the CEO, see also Note 5.

Internal audit is an objective and independent function designed to add value and improve the organization's operations. The internal audit helps the organization to accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness and suitability of risk management, control and governance processes.

The internal audit function conducted a number of audits of the company's operations during the year in accordance with a risk based internal audit activity plan, which has been approved by the Board of Directors. The Chief Audit Executive reports the results of the audits directly to the Board of Directors. In addition, the Board of Directors receives an annual report containing a summary of the function's work, and significant observations during the year.

The internal audit function also performs follow-up activities to ensure that corrective measures have been taken by the business.

The external auditors are independent reviewers of the company's accounts and assess and express an opinion on whether they consider that the annnual report gives a true and fair view of the financial position and result. They also review that the accounts have been prepared in accordance with applicable laws and standards. The auditors also review the administration of the Board and the CEO.

Sustainability report

In accordance with the Swedish Annual Accounts Act, If P&C Insurance Holding Ltd (publ) shall prepare a sustainability report which includes the Parent Company and its subsidiaries. If has chosen to prepare the statutory sustainability report separately from the annual report, named If Sustainability Report 2021. The report is available on the website https://www.if.se.

Parent Company

The operations of the Parent Company If P&C Insurance Holding Ltd (publ) consist primarily of ownership and management of shares in subsidiaries and managing a part of the cash surplus in a dedicated investment portfolio. Parts of Group Management are employed by the Parent Company and the subsidiary If P&C Insurance Ltd (publ) is invoiced for management services performed.

The Parent Company is also the main account holder for a group cash pool account system comprising the major part of the flows of liquid funds from the insurance operations. Underlying flows give rise to intra-group transactions within the Parent Company's balance sheet.

The Parent Company's net profit for the year decreased to MSEK 5,856 (7,227), mainly as a result of decreased dividends from subsidiaries.

The Parent Company's consolidation capital at year end amounted to MSEK 20,003 (21,153) and its total assets to MSEK 22,552 (22,971).

Appropriation of earnings

Unrestricted funds in the company, including the Fair value reserve, that are available for appropriation by the Annual General Meeting in accordance with the balance sheet, amount to:

SEK	
Net profit for the year	5,856,277,816
Profit brought forward	8,522,457,969
Fair value reserve	8,771,119
	14,387,506,904

The Board of Directors proposes appropriation of earnings as follows:

SEK	
Paid as dividend	-
Profit to be carried forward	14,378,735,785
Be carried as Fair value reserve	8,771,119
	14,387,506,904

[1] During 2020, dividends paid totaled approximately SEK 46.20 per share, of which dividends resolved by the Extraordinary General Meeting accounted for about SEK 46.20 per share.

[2] During 2021, dividends paid totaled approximately SEK 47.67 per share, of which dividends resolved by the Extraordinary General Meeting accounted for about SEK 47.67 per share.
The Board of Directors and the President propose that the 2022 Annual General Meeting resolve not to pay any dividend.

[3] The fair value reserve corresponds in full to value changes of financial assets available for sale with deduction for deferred tax.

There are a total of 136,350,000 shares with a quotient value of SEK 19.99 each, including 103,525,000 Series A shares carrying one vote and 32,825,000 Series B shares carrying one tenth of a vote. The number of shares was unchanged during the year.

The accumulated translation difference amounted to MSEK 440 (-269).

Notes to the consolidated financial statements

Note 1 – Accounting policies

Company information

This annual report and the consolidated financial statements for If P&C Insurance Holding Ltd (publ) were prepared and authorized for publication by the Board of Directors and CEO on March 10, 2022 and will be presented to the 2022 Annual Meeting for approval. The company is a Swedish limited liability company with its registered office in Stockholm and its headquarters in Solna, Sweden.

The Group's primary operations are described in the Board of Directors' Report.

Statement of compliance with regulations applied and information about new accounting standards

The annual report for the Parent Company If P&C Insurance Holding Ltd (publ) was prepared in accordance with the Annual Accounts Act (ÅRL) and the Swedish Financial Reporting Board's recommendation RFR 2 (Accounting for legal entities).

If has prepared the consolidated accounts in accordance with international accounting standards (IFRS Standards, IAS Standards, SIC Interpretations and IFRIC Interpretations), as adopted by the European Union. In addition, If applies the supplementary provisions ensuing from the Annual Accounts Act for Insurance Companies (ÅRFL), the Swedish Financial Supervisory Authority's regulations and general recommendations on annual accounts in insurance companies (FFFS 2019:23) and, in appropriate parts, the Swedish Financial Reporting Board's recommendation RFR 1 (Supplementary Accounting rules for Groups).

In accordance with Chapter 2 of the Swedish Annual Accounts Act (ÅRL) and IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors, it is possible to depart from the aforementioned regulations if the effect of the departure is immaterial.

The financial reports and notes are presented in SEK millions (MSEK), unless otherwise stated. The totals in tables and statements in the annual report may not always reconcile due to rounding. The aim is for each line item to correspond to the source and therefore rounding differences may arise in totals.

Issued, but not yet effective, international accounting standards or standards that If for some other reason does not apply, are currently assessed as not likely to have any significant impact on the financial statements when first applied, except IFRS 9 Financial Instruments and IFRS 17 Insurance Contracts.

IFRS 9 Financial Instruments took effect on January 1, 2018. In accordance with an EU-adopted amendment to IFRS 4 Insurance Contracts, the IASB has decided that, under certain circumstances, insurance companies may delay their initial application of IFRS 9 so that the date coincides with the initial application of IFRS 17 Insurance Contracts (see below). If meets these requirements since If has not previously applied IFRS 9 and the carrying amount of the insurance-related liabilities accounts for more than 90% of the carrying amount of the total liabilities. In light of this, If has decided to delay the application of IFRS 9 until January 1, 2023. Accordingly, the transition from IAS 39 to IFRS 9 is not expected to have any significant impact on If's financial reporting until 2023. However, expanded disclosure requirements have been introduced for financial instruments, which will facilitate comparisons with companies that have already implemented IFRS 9. For more information, refer to Note 22 Other financial investment assets and derivative liabilities.

IFRS 9 contains some optionality, and If's opinion is that there are significant cross-influences with respect to the published standard concerning insurance contracts that still need to be carefully assessed before a final decision can be made as to the classification of financial assets.

IFRS 17 Insurance Contracts was adopted by the EU in November 2021 and takes effect on January 1, 2023. IFRS 17 replaces IFRS 4 Insurance Contracts and, unlike its predecessor, contains a complete framework for the measurement and presentation of insurance contracts. If will continue to assess the impacts of IFRS 17 during the financial year 2022 and complete the process development to meet the reporting requirements in the standard. Based on a preliminary assessment, the premium allocation approach will be applied for all insurance business, as well as a fully retrospective approach to the transition to the new standard. Implementation of IFRS 17 is expected to have a major impact on the presentation and disclosures of the financial statements.

Bases for consolidation

The consolidated accounts include the Parent Company, If P&C Insurance Holding Ltd (publ), and all companies in which the Parent Company directly or indirectly holds more than 50% of the votes for all shares or in some other manner has a controlling interest.

The consolidated accounts have been prepared in accordance with IFRS 10 and IFRS 3. Acquired companies are reported in accordance with the purchase method, which means that assets and liabilities are reported in the acquiring company's accounts at the acquisition values determined in accordance with an established acquisition analysis. The identified assets and liabilities in the acquired company are measured at fair value in the acquisition analysis. If the acquisition value of shares in a subsidiary exceeds the established fair value of the acquired assets and liabilities, the difference is reported as goodwill. In conjunction with the transition to IFRS, an opening balance sheet was compiled as of January 1, 2004. In line with the exemption rules in IFRS 1, no recalculation was made of acquisitions and mergers prior to this date.

In consolidating foreign subsidiaries, locally prepared income statements and balance sheets are recompiled to eliminate differences between local accounting policies and the accounting policies applied in the consolidated accounts. These recompilations mainly comprise adjustments for unrealized changes in value in investment assets and derivatives, deferred acquisition costs, provision for unexpired risks and interest allocated to the technical result.

Outside Sweden, any equalization or catastrophe reserves governed by tax or business laws are treated in consolidation in the same manner as Swedish untaxed reserves.

In 1999, Storebrand and Skandia agreed to form a joint venture and transfer their portfolios of property and casualty business to If P&C Insurance Ltd (publ). The merger in 1999 is reported in the consolidated accounts, applying joint venture accounting based on the carryover method. According to the carryover method, the joint venture unit assumes the assets and liabilities transferred from the owners at the carrying amount and then continues to operate the business that has been taken over. As a result of this accounting procedure, no goodwill arose in If P&C Insurance Holding Ltd (publ) Group. Goodwill based on net assets was reported in the subsidiary If P&C Insurance Ltd (publ), since in formal terms the assets from Storebrand were transferred at a value that exceeded the previous carrying amount. Since the subsidiary If P&C Insurance Ltd (publ) has a right to make a tax deduction for the amortization of the goodwill based on the net assets, a value has arisen in the Group, recognized in the consolidated accounts for 2020 at a rate of 20.6% of the non-deducted goodwill amount in the subsidiary, which represents deferred tax assets.

Transactions, receivables and liabilities in foreign currency and translation of the accounts of foreign subsidiaries and branches

Individual companies and branches in the If Group report in their respective functional currencies, determined as the local currency in the country in which the company or branch is active. Income statement items in another currency than the functional currency (foreign currency) are translated to their respective presentation currency using the average exchange rate for the month during which they were reported, while assets and liabilities in foreign currency are translated at the closing date exchange rates. Any unrealized translation differences arising are reported in the income statement as changes in value under Investment result. Currency forward contracts used to economically hedge currency exposure are measured at fair value and these effects are reported in their entirety in the income statement as changes in value.

In the preparation of the consolidated accounts, translation from the presentation currencies of the companies and the branches into SEK is performed in line with IAS 21. Items in the balance sheet are translated using the exchange rate on the balance sheet date and items in the income statement are translated using the average exchange rate for the period during which the item arose. Translation differences are reported in other comprehensive income when arising from the use of different exchange rates for items in the balance sheet and income statement, the fact that capital contributions and dividends are translated at different exchange rates than those prevailing on the transaction date and that shareholders' equity is translated at a different exchange rate at year-end than at the beginning of the year.

For If's most significant currencies, the following exchange rates were used as of December 31 to translate balance sheet items in foreign currency to SEK:

	2021	2020
Danish kroner	1.38	1.35
Euro	10.25	10.03
Norwegian kroner	1.03	0.96
US dollars	9.05	8.18

Policies applying to items in the consolidated balance sheet

Goodwill

Goodwill is measured at its acquisition value, adjusted for any impairments. Goodwill arises in connection with the acquisition of operations or portfolios. In conjunction with acquisitions, an acquisition balance sheet is compiled in which all identified assets and liabilities are measured at fair value on the acquisition date. When the acquisition price cannot be attributed to identifiable assets and liabilities, this portion is recognized as goodwill.

Goodwill is an asset with an indefinite useful life and thus it is not subject to amortization. To ensure that goodwill is not overvalued in the balance sheet, an annual analysis is conducted of individual goodwill items to identify impairment requirements. The analysis determines the recoverable amount, defined as the higher of the value in use and the net realizable value. The value in use is calculated as the discounted value of expected future cash flows attributable to the acquired net assets. When the recoverable amount measured on the valuation date is less than the carrying amount in the Group, the carrying amount is reduced to the recoverable amount. If, subsequently, a higher recoverable amount can be set, this does not result in revaluation or reversing of previous impairments.

Other intangible assets

Other intangible assets consist of externally acquired rights, customer relationships, trademarks etc. and internally developed intangible assets. Intangible assets are measured at their acquisition value less deductions for accumulated amortization.

Internally developed intangible assets are measured at acquisition value, determined as the direct and indirect expenses for the development (programming and testing) of computer systems that are expected to provide financial benefits in the future. Only expenses linked to new development and mainly limited to major system changes are capitalized.

Rights, customer relationships and similar assets are amortized from the acquisition day or the day they are valid.

Customer relationships consist of the calculated value of current customer contracts and the calculated value of renewal of the contracts. The estimated useful life for customer relationships is 3-7 years and they are amortized using the straight-line method.

Capitalized development expenses are amortized from the date the asset is put into production. Amortization is applied over its estimated useful life using the straight-line method. The useful life is determined individually per asset and for capitalized developments does not exceed 10 years.

Acquired trademarks have indefinite useful life and thus they are not subject to amortization. Instead, they are tested for impairment at least annually.

If there is any indication on the closing date that the carrying amount of an intangible asset is higher than its recoverable amount, a calculation is made of the asset's recoverable amount. Recoverable amount refers to the higher of the asset's net realizable value and its value in use. If the determined recoverable amount is less than the carrying amount, the carrying amount of the asset is reduced to its recoverable amount. If, subsequently, a higher recoverable amount can be set, a previous impairment may be reversed.

Land and buildings/investment properties

If reports all its owned properties as investment assets (investment properties), at fair value pursuant to IAS 40 and with changes in value reported in the income statement. This classification is in accordance with If's basic approach to these assets. If has concluded that a separation of such owned properties, which according to IAS 40 represent owner-occupied properties, would only have an insignificant effect on the particular asset and profit/loss item. The fair value consists of the realizable value and is set annually by external surveyors using acknowledged and accepted valuation methods. Accepted methods consist of local sales-price method (current prices paid for comparable properties in the same location/area) or cash flow models applying current market interest rates for the calculation of the present value of the property. Since valuation is effected at fair value, properties are not depreciated.

Investments in associates

Associates refer to companies in which If P&C Insurance Holding Ltd (publ) directly or indirectly has significant influence, which is normally the case when the shareholding amounts to a minimum of 20% of the voting rights for all shares in the company. Associates are reported in the consolidated accounts using the equity method. The equity method means that the carrying amount of an associate is continually adjusted for changes in the holding company's share of the associate's net assets. If there is any indication that an associate's carrying amount is higher than its recoverable amount, a calculation is made of the associate's recoverable amount. Recoverable amount refers to the higher of the associate's net realizable value and its value in use. If the determined recoverable amount is less than the carrying amount, the carrying amount of the associate is reduced to its recoverable amount. If, subsequently, a higher recoverable amount can be set, a previous impairment may be reversed.

Minor holdings are accounted for in a simplified way. The carrying amount is normally only adjusted with If Group's share of the respective company's result after tax and subject to a delay of one quarter. Additional information is provided in Notes 17 and 21.

Other financial investment assets

A financial asset or financial liability is recognized in the balance sheet when the company becomes a party to the contractual terms of the financial instrument. A financial asset is derecognised from the balance sheet when the rights in the contract are realized, expire or as a result of a transfer of the assets the company doesn't bear longer significant risks and benefits from the assets as well as it loses control over them. Furthermore, a cancellation is made if a significant modification has been made to the contract terms of a financial asset or liability. A financial liability is removed from the balance sheet when the obligation in the agreement has been fulfilled, cancelled, or otherwise terminated.

The purchase and sale of money market and capital market instruments on the spot market as well as derivative transactions are reported in the balance sheet on the transaction date. The counterparty's liability/receivable is reported between the transaction date and payment date at the gross amount under the item Other assets or Other creditors.

Financial investment assets are reported in the original currency and at fair value with – as a main principle – changes in value recognized in other comprehensive income until being realized. The presentation below describes the detailed valuation for each type of asset.

Shares

Shares are measured at fair value. For shares listed on an authorized stock exchange or marketplace, the sales value normally refers to the latest trade price on the closing date. Unlisted securities included in private equity investments are measured using established valuation models.

Interest-bearing securities

Interest-bearing securities are measured at fair value and accounted for by separating the amortised cost from the change in value. The amortised cost is the discounted present value of future payments, for which the discount rate applied is the effective rate of interest on the acquisition date. This means that acquired premium and discount on coupon instruments are distributed over the period as interest during the bond's remaining time to maturity, in the case of loans with adjustable interest rates, to the next rate-adjustment occasion. For discount instruments, the reported interest income pertains only to distribution of the discount in conjunction with the acquisition. The return on interest-bearing securities is divided into interest income and changes in value. The change in value is calculated as the difference between the fair value (market value) of the securities and its amortised cost. When measuring at fair value, the listed bid price or yield-curve models, based on listed mid prices, are used.

Derivatives

All derivative instruments are individually measured at fair value. Derivative transactions with a positive fair value on the closing date are reported as Other financial investment assets and derivative positions with a negative fair value are reported on the liabilities side of the balance sheet under the heading Derivatives.

Receivables

Receivables are reported in the amounts expected to be received.

Provisions for doubtful receivables are normally accounted for on the basis of individual valuation of the receivables. Provisions pertaining to standard products are measured through a standard computation in the form of maturity stages based on reported losses during prior periods.

Tangible assets

Tangible assets consist of machinery and equipment and are initially measured at acquisition value. Acquisition value includes not only the purchase price but also expenses directly attributable to the acquisition. Machinery and equipment are reported at historical acquisition value, less accumulated straight-line depreciation. These deductions are based on historical acquisition value and the estimated useful life.

Depreciation period	
Office equipment	3–10 years
Computer equipment	3–5 years
Vehicles	5 years
Other fixed assets	4–10 years

If Group recognizes right-of-use assets for material leases that are in scope of IFRS 16 Leases. If applies a company-specific materiality assessment that includes, but is not limited to, the two exemptions specified in the standard. The acquisition cost corresponds to the amount equivalent to lease liabilities and any lease prepayments made before the commencement date.

Subsequently, the right-of-use asset is depreciated using the straight-line method from the commencement date to the end of the estimated useful life which is set at the end of the expected lease term. The carrying amount of the right-of-use asset is adjusted for certain remeasurements of the lease liability.

If there is any indication on the closing date that the carrying amount of a tangible asset owned or held through a right of use is higher than its recoverable amount, a calculation is made of the asset's recoverable amount. Recoverable amount refers to the higher of the asset's net realizable value and its value in use. If the determined recoverable amount is less than the carrying amount, the carrying amount of the asset is reduced to its recoverable amount. If, subsequently, a higher recoverable amount can be set, a previous impairment may be reversed.

Cash and bank

In addition to small petty cash amounts, cash and bank consists of bank balances in the insurance operations and funds transferred to asset management that have not been invested in investment assets.

Deferred acquisition costs

Sales costs that have a clear connection with the writing of insurance contracts are reported as an asset, namely as deferred acquisition costs. Sales costs include operating expenses such as commissions, marketing costs, salaries and overheads for sales personnel, which vary according to, and are directly or indirectly related to, the acquisition or renewal of insurance contracts. The sales costs are deferred in a manner that corresponds to the amortization of unearned premiums. The amortization period ordinarily does not exceed 12 months.

Subordinated debt

Issued subordinated loans are reported in their original currency at amortised cost, which includes premiums/ discounts arising on the issue date and other external transaction costs attributable to borrowing. During the term of the loan, costs for subordinated loans are reported using the effective interest rate method, whereby premiums/ discounts and capitalized borrowing expenses are distributed over the term of the loan; however, no later than the interest-adjustment date in the case of loans with adjustable interest rates.

Technical provisions

Technical provisions consist of:
– Provision for unearned premiums and unexpired risks;
– Provision for claims outstanding.

The provisions correspond to the liabilities pursuant to current insurance contracts.

Provision for unearned premiums and unexpired risks

The provision for unearned premiums is intended to cover anticipated claims costs and operating expenses during the remaining term of insurance contracts in force.

In property and casualty insurance and reinsurance, the provision for unearned premiums is calculated on a strictly proportional basis over time for most products, i.e. calculated on a pro rata temporis basis.

In the event that premiums are deemed to be insufficient to cover anticipated claims costs and operating expenses, the provision for unearned premiums is required to be augmented by a provision for unexpired risks. Calculation of the provision for unexpired risks must also take into account premium installments not yet due.

Provision for claims outstanding

The provision for claims outstanding is intended to cover the anticipated future payments of all claims incurred, including claims not yet reported to the company (the IBNR provision). The provision for claims outstanding includes claims payments plus all costs of claims settlements.

The provision for claims outstanding in direct property and casualty insurance and reinsurance is calculated with the aid of statistical methods or through individual assessments of individual claims. Often a combination of the two methods is used, meaning large claims are assessed individually while small claims and claims incurred but not reported (the IBNR provision) are calculated using statistical methods.

Apart from provisions for vested annuities and provisions for unknown but probable claims that pertain to annuities, the provisions for claims outstanding are not discounted. Provisions for annuities are discounted to present value using standard actuarial methods, taking anticipated inflation and mortality into account.

Pension costs and pension commitments and other employee benefits

The Group's pension obligations comprise pension plans in several national systems that are regulated through local collective bargaining agreements and social insurance laws. The obligations consist of both defined-contribution and defined-benefit plans.

For defined-contribution plans, the pension cost comprises of the premiums paid for securing the pension obligations in life insurance companies.

The reporting of funded and unfunded defined-benefit pension plans complies with the regulations contained in IAS 19 Employee benefits (issued in 2011). According to these rules, the present value of future pension obligations less the market value of the plan assets covered by the plan is to be recognized as a pension liability in the balance sheet.

What is to be recognized as a pension cost during the fiscal year is the sum of (i) the actuarially calculated earnings of old-age pensions during the year, calculated straight-line based on pensionable income at the time of retirement, and (ii) calculated interest expense for indexing the preceding year's established net pension obligation. The calculation of pension costs during the fiscal year primarily occurs at the beginning of the year and is based on assumptions about factors such as salary growth and price inflation throughout the duration of the obligation and on current market interest rates adjusted to take into account the duration of the company's pension obligations. If includes the first amount in the technical result while the interest expense is recognized separately in the income statement. The technical result also includes past service income and cost, e.g. effects of plan amendments.

Remeasurements of the pension obligation due to actuarial gains and losses, and because the return on plan assets deviates from the calculated interest rate, are recognized in other comprehensive income.

If has certain pension obligations that have been classified as defined-benefit plans but recognized as defined-contribution plans, either because If lacks the information necessary to recognize them as defined-benefit plans or because they have been deemed as insignificant.

Provision is also made for the calculated value of other earned remuneration of employees, the final amount of which is determined and paid after the end of the fiscal year, such as one-year variable remuneration and multi-year incentive programs.

If Group's cash-settled share-based payments give rise to an obligation to the employees, which is measured at fair value and is reported as an expense with a corresponding increase in liabilities. Fair value is initially calculated at the time of granting and at every reporting date thereafter. The fair value of the cash-settled units is calculated using the Black-Scholes model and the terms and conditions of the allocated units are taken into account. The provision recognized in the balance sheet is the earned part of the value on the balance sheet date and any changes in the provision are reported in the profit for the year as a personnel cost.

Other creditors

Lease liabilities are initially measured at the present value of the fixed lease payments and certain variable lease payments to be made under the lease that are not paid at the commencement date, discounted using the incremental borrowing rate. The lease liabilities are subsequently measured at amortised cost using the effective interest method. They are remeasured to reflect any lease modifications or reassessments. Lease liabilities are recognized in the line item Other creditors.

The lease term is determined as the expected lease term. This includes the non-cancellable period of the lease contracts, adjusted for any optional extension or termination periods that If is reasonably certain to exercise.

The balance sheet line item Other creditors also includes Loans to credit institutions that are first reported at fair value, including transaction costs directly attributable to the acquisition or issue of the loan. After the acquisition, they are reported at amortized cost according to the effective interest method. Interest expenses and exchange rate gains and losses are reported in the income statement. Gains or losses on removal from the balance sheet are also recognized in the income statement.

Policies applying to items in the consolidated income statement

In the income statement, there is a division into the result of insurance operations – the technical result – and the non-technical result, which is primarily attributable to asset management.

Items included in the technical result pertain almost entirely to the Group's operations as an insurer, that is, the transfer of insurance risk pursuant to the definition in IFRS 4, Insurance Contracts. Only contracts that do not cover a significant transfer of insurance risk are attributable to other operations and are reported in accordance with to IFRS 15 Revenue from Contracts with Customers.

Reporting in the income statement complies with the principle for gross accounting of accepted and ceded insurance. Income statement items thus disclose the accounting effects of the underlying flow and the accrual of issued insurance contracts and the equivalent for reinsurance purchased.

Premiums written

The premium written refers to the compensation that If receives from the policyholder in return for the transfer of risk. Premiums written are reported in the income statement at the inception of risk coverage in line with the insurance contract. When the contracted premium for the insurance period is divided into several amounts, the entire premium amount is still recognized at the beginning of the period.

Premiums earned

Premiums earned are reported as the share of premiums written that is attributable to the reporting period. The share of premiums written from insurance contracts pertaining to periods after the closing date is allocated to the premium reserve in the balance sheet. The provision posted in the premium reserve is normally calculated by distributing premiums written strictly on the basis of the underlying term of the insurance contract. For certain insurance products – in particular those with terms longer than one year – the accrual is risk adjusted, i.e. in relation to expected claims.

Allocated investment return transferred from the non-technical account

The investment result is reported in the non-technical result. Part of the income is transferred from the investment result to the technical result for insurance operations based on the net technical provisions. When calculating this income, interest rates corresponding to the discount rate in each country are used for annuities. For other technical provisions, interest rates are used that for each currency match the interest rate for government bonds with a maturity that approximates with the technical provisions. Negative interest rates are not used.

Other technical income

Other technical income consists of income in insurance operations that does not involve the transfer of insurance risk. Such income is primarily attributable to sales commission and services for administration, claims settlement, etc. in insurance contracts on behalf of other parties.

Furthermore, the subsidiary Viking Assistance Group AS provides roadside assistance. Income from these services are recognized when roadside assistance has been provided. Viking also has prepaid assistance agreement towards different customer groups, and for these agreements the share of income associated with future services is recognized in the balance sheet as prepaid assistance at the time of sale and subsequently recognized in the income statement according to actual deliveries of roadside services.

Claims incurred

Total claims incurred for the accounting period cover claims payments during the period and changes in provisions for unsettled claims. In addition to claims payments, claims incurred also include claims-adjustment expenses. Provisions for unsettled claims are divided into reported and claims not yet reported to the company (IBNR).

Operating expenses

Operating expenses reported in the technical result in the income statement are divided into expenses arising from the handling of insurance contracts that include the transfer of insurance risk, and costs for other technical operations. Administrative expenses refer to direct and indirect costs and are distributed among the following functions, Acquisition, Claims settlement, Administration, Asset Management and Other.

Claims settlement costs are included in the administrative expenses of insurance operations but are reported among claims incurred in the income statement.

In addition to administrative expenses, the operating expenses of insurance operations include acquisition costs and deferral of acquisition costs.

Investment result

The investment result is divided into direct investment income and changes in value and with deductions for management costs. The Direct investment income item primarily includes dividends on shareholdings and interest income from investments reported using the effective interest rate method, where the premiums / discounts resulting from acquisitions are distributed across the remaining useful life of the asset. The Changes in value item mainly comprises of realized value changes on investment assets, but also impairment losses from Available-for-sale financial assets that were deemed necessary in accordance with the specific impairment requirements in IAS 39.

In line with these paragraphs, If has assessed whether there is any objective evidence that an asset is impaired. In this assessment, If has chosen to use, in respect of interesting-bearing securities, criteria related to issuer default as well as to make an individual assessment for interest-bearing securities with a fair value below 50% of nominal value. In respect of shares, the assessment is also conducted on an individual basis where generally all shares with a significant (>20%) and/or prolonged (12 months) decline in value in relation to the acquisition cost shall be impaired. For both asset categories, the carrying amount is reduced to the current fair value. In the event of a subsequent recovery of a value decline, the recovery is presented as a reversed impairment loss in respect of interest-bearing securities but not in respect of shares.

The Group's currency result is included in the Changes in value item.

Taxes

The Group's tax expense is calculated in accordance with IAS 12 Income taxes. This entails calculation and recognition of both current and deferred tax.

Current tax is calculated individually for every unit in accordance with the tax rules in each country. Current tax also includes non-deductible coupon taxes in respect of dividends received.

If's foreign branch offices are taxed on their results in the country concerned. In Sweden, the company is in principle liable for taxation on all income, including the reported results from the foreign branch offices.

In Sweden, taxable income is also impacted by translation differences pertaining to the net assets of branches, which are recognized in other comprehensive income in accordance with IAS 21. If has opted for centralized asset management, which gives rise to considerable intra-company balance sheet items. In contrast to other assets and liabilities, the translation differences associated with these intra-company items are not taxable/deductible. As a result, the net impact on taxable income can be substantial and far exceed the recognized translation differences.

The liability that arises in the Swedish head office due to the centralized asset management is denominated in local currency and thus gives rise to currency effects on the intra-company items which, in accordance with IAS 21, are recognized in profit or loss. These effects are not taxable/deductible either and can thus also have a material impact on the taxable income.

The two permanent tax effects arise simultaneously and display a strongly opposing correlation, relate to the same counterparty and are settled at the same time, hence the tax effects of the exchange-rate differences on the head office's internal liability are netted against the tax effects arising in conjunction with the translation of the balance sheets of branches. If thus recognizes all tax effects related to the above items net in other comprehensive income.

If the company pays tax in Sweden for its foreign income, with the aim of avoiding double taxation, a deduction for the taxes paid abroad is normally allowed.

Income taxes abroad are attributable to taxes on foreign branch office income and withholding taxes on the return on foreign investment assets.

In Sweden, the tax rate during the year was 20.6% of taxable income. In Denmark, the tax rate was 22%, in Finland 20% and in the Norwegian P&C insurance branch 25%.

Deferred tax attributable to temporary differences between the amounts reported and the equivalent actual taxation is reported in the company's accounts. For income reported in the income statement for the period but which is not taxed until a later period, a deferred tax cost is charged, which results in a corresponding liability item, Deferred tax liabilities. Similarly, costs that will not result in tax deductions until a later period give rise to a deferred tax revenue and a corresponding deferred tax asset. Deferred tax assets and liabilities are reported net when they pertain to the same tax authority and can be offset against each other. The tax effect of tax loss carry-forwards is reported as deferred tax assets if it is considered likely that they can be used to offset taxable profits in the future.

The application of joint venture accounting resulted in a deferred tax asset arising in connection with Storebrand's transfer of operations. This is based on the difference between the value for tax purposes and the carrying amount of these net assets. Additional comments regarding joint venture accounting are provided in the section Bases for consolidation above.

Policies applying to items in the consolidated cash flow statement

If defines cash and cash equivalents as the balance in transaction accounts in banks. The cash flow for the year thus consists of the net of inflows and outflows of cash and cash equivalents during the year, and, at the same time, the reconciliation of the balance-sheet item Cash and bank balances is a reconciliation of the Group's cash and cash equivalents.

In the Group's income statement, the premiums written are accrued over the contractual period. Claims provisions are continuously generated using statistical models for anticipated claims, and the actual claims reserves are made when the claims occur. The claim is finally settled through payment to the policyholder. The cash flow arising from an insurance contract and a claim thus differs considerably from the procedure for recognizing income and expenses. The link between the income statement and cash flow is recognized in the Group's balance sheet, where accrual items are recognized in technical provisions (premium and claims provisions) and in the receivables and liabilities that comprise outstanding items attributable to insurance contacts. Due to extensive insurance operations, the law of large numbers means that the effects of the underlying differences between accounting and real cash flow are reduced considerably.

The cash flow statement shows separate items of the Group's cash flow. The analysis has its foundation in the income statement items that are directly connected with external payment flows. These items are adjusted in the statement with the changes in the balance sheet during the period (counterparty receivables/assets) that are directly linked to the income statement items in question. The balance sheet items reported in the Group comprise significant receivables/liabilities in foreign currency and are thus subject to continuous revaluation at the exchange rate prevailing at each closing date. In the cash flow statement, the effect of this recalculation is eliminated, and the individual cash flows shown in the analysis are therefore not directly evident as differences in the balance sheets and notes presented in other parts of the annual report.

Policies applied for alternative performance measures

Key figures are financial measurements of the historical earnings trend and financial position. If presents a number of key figures, some of which are referred to as alternative performance measures and are not defined in applicable accounting standards, e.g. IFRS, ÅRFL, FFFS 2019:23 and the Swedish Insurance Business Act (FRL). Definitions of a number of key figures are provided in the Glossary and definitions, including some that are marked as alternative performance measures.

Alternative performance measures are used by If when deemed relevant to monitor and describe the Group's/ the company's financial situation and to provide additional useful information to the users of its financial statements. In order to facilitate increased comparability, comments on changes in amounts and percentages between the current year and the preceding year are occasionally adjusted for the impact of changes in exchange rates, whereby amounts in foreign currency have been recalculated using the same exchange rates for the respective years.

Since these measures have been developed and adapted for If, they are not fully comparable with similar performance measures presented by other companies.

Accounting policies in the Parent Company

Other operating income

Revenues accounted for in the Parent Company refer to sales of management services to If P&C Insurance Ltd (publ).

Accounting of group contributions

Paid and received group contributions are recognized as an appropriation in the income statement.

Accounting for holdings in subsidiaries and associates

Shares in subsidiaries and associates are reported at acquisition value with deductions for any impairments. The acquisition value includes in certain cases external transaction costs attributable to the acquisition. Dividends from group companies and associates are accounted for when received.

Accounting for short-term investments

Short-term investments are recognized at fair value with changes in value recognized in other comprehensive income until they are realized. Refer to Policies applying to valuation of other financial investment assets above.

Cash flow statement

The Parent Company's cash flow statement has been prepared in accordance with the indirect method, which means operating profit is adjusted for non-cash effecting transactions such as depreciation and impairment losses. The cash flows are classified by operating, investing and financing activities.

Note 2 – Significant estimations and judgments affecting the financial statements

Preparing financial statements in accordance with IFRS requires that the Board and executive management make judgments and assumptions that affect the application of the accounting policies and the reported amounts of assets, liabilities, revenue and expenses. The judgments and assumptions are based on experience and insight into the insurance business. The actual outcome may deviate from these judgments and estimations.

Judgments made by the Board and executive management in the application of IFRS that have a significant effect on the financial statements for 2021 and estimations that may cause material adjustments in the financial statements in subsequent years are commented on below.

Goodwill

If reports goodwill attributable to the acquisition of Sampo's Finnish property and casualty operations and the acquisitions of Vertikal Helseassistanse AS and Viking Assistance Group AS. In accordance with IFRS 3, goodwill is not amortized. To ensure that the carrying amount for this item is not reported at an excessively high value, a calculation of its recoverable amount has been done. Additional comments on the parameters used, conducted assessments and so forth are made in Note 19.

Valuation of investment assets

If has elected to apply a classification according to IAS 39 that means that almost all financial investment assets are measured at fair value. Since the valuation of the assets is essentially based on observable market listings, the company believes that this accounting method offers a good presentation of the company's holdings of investments assets.

The main part of the financial assets that are not derivatives has been classified as available-for-sale financial assets. Value changes on these assets are therefore normally recognized in other comprehensive income until being realized, unless the application of the specific impairment paragraphs in IAS 39 require an impairment loss to be recognized in the income statement. In line with these paragraphs, If has assessed whether there is any objective evidence that an asset is impaired. The company's assessment affects the reported profit of the year but not shareholders' equity. The assessment criteria are presented in Note 1 (under the heading of Investment result). Additional information is provided in Notes 5, 15 and 22.

Technical provisions

The provision for unsettled claims is designed to cover anticipated future payments for all claims incurred, including claims not yet reported to If, referred to as IBNR provision. The provision is calculated using statistical methods or through individual assessments of claims. These provisions are significant in an assessment of the company's reported results and financial position, since any deviation from actual future payments gives rise to a prior-year claims result reported in future years. Additional comments on provision risk are provided in Note 5 and an account of the company's prior-year claims results in recent years is available in Note 32.

The provision for unearned premiums and unexpired risk is designed to cover anticipated claims and operating expenses during the remaining term of the insurance contracts concluded. For most products, the provision is calculated strictly in proportion to time. If the premium level is deemed to be insufficient to cover the anticipated claims and operating expenses, the provision for unearned premiums is strengthened with a provision for unexpired risks. This assessment includes estimates of future claims frequency and other factors affecting the need for a provision for unexpired risk. This provision is also commented on in Note 5.

Provisions for pensions

If applies IAS 19 Employee benefits for reporting pensions expenses and outstanding pension commitments. According to this standard, the company should determine which pension plans that are to be seen as defined-benefit plans, as well as a number of parameters that are significant in the calculation of, for example, the company's net obligations and the amounts that are to be reported in the income statement, other comprehensive income and balance sheet. Discount rates for the pension obligations are set in Sweden and Norway with reference to AAA and AA corporate bonds, including mortgage-backed bonds, issued in local currency. Significant parameters are further presented in Note 34.

Note 3 – Recognition of the effects of changed exchange rates

In addition to the Nordic currencies, If underwrites insurance in the most frequently used international currencies. Moreover, asset management is characterized by a large degree of international diversification. Accordingly, assets and liabilities in currencies other than the Swedish krona account for considerable sums. According to If's Currency Policy, exchange-rate risks are to be limited by conducting specific hedging transactions when required. If's Currency Risk Policy sets limits for currency exposure.

MSEK **Exchange-rate effects in the technical result**	**2021**	**2020**	**Change**	***Of which exchange-rate effect***
Premiums earned, net of reinsurance	48,418	47,028	1,389	*-230*
Allocated investment return transferred from the non-technical account	145	173	-28	*3*
Other technical income	1,232	1,079	153	*23*
Claims incurred, net of reinsurance	-31,717	-31,204	-514	*193*
Operating expenses	-8,922	-8,575	-347	*20*
Technical result from property and casualty insurance	**9,155**	**8,502**	**653**	***9***

As a result of the large amount of foreign currency in business operations, financial reports in the Swedish krona are continuously impacted by effects attributable to exchange-rate changes. In the income statement, transactions in foreign currency are translated into the Swedish krona using the average exchange rate during the month when the transaction was incurred or reported. Normally, the accounting of insurance contracts matches the contracted currency. Accordingly, exchange-rate effects that could have an impact on a specific reporting line in the income statement do not have a material impact on the technical result from property and casualty insurance.

Technical income and operating expenses net, distributed by currency 2021	**Premiums earned**	**Total expenses**	***Of which claims costs***	***Of which operating expenses***
SEK	32%	29%	*23%*	*6%*
NOK	31%	32%	*26%*	*6%*
DKK	9%	10%	*8%*	*2%*
EUR	24%	25%	*20%*	*5%*
USD	2%	4%	*4%*	*0%*
Other	1%	1%	*0%*	*0%*
Total	**100%**	**100%**	***81%***	***19%***

Balance sheet items established in foreign currency are translated into SEK using the exchange rate on the balance sheet date. Currency exposure in the balance sheet is mainly controlled by the continuous allocations of If's investment assets in foreign currency. The remaining exposure that arises is managed through the use of currency forward contracts.

For 2021, a net exchange-rate result of negative MSEK 134 (positive 60) was recognized in the income statement. The loss arose as a result of the translation of the income statement and balance sheet items and from currency derivatives. Accordingly, exchange-rate result may be divided into:

MSEK **Total exchange-rate result**	**2021**	**2020**
Conversion of items in the income statement and balance sheet	-329	268
Realized effects of currency derivatives	-200	-16
Unrealized effects of currency derivatives	394	-192
Total exchange-rate result	**-134**	**60**

Note 4 – Information about related companies

Relations with associates

The Parent Company If P&C Insurance Holding owns a share of 33.0% of Rogaland Forsikring AS, which is an insurance agency that sells insurance products on behalf of If P&C Insurance Ltd (publ).

The Parent Company If P&C Insurance Holding owns a share of 22.0% of CAB Group AB, which provides systems and services for calculations of costs of repairing vehicles.

The Parent Company If P&C Insurance Holding owns directly (10.5%) and indirectly via If P&C Insurance Ltd (publ) (15.3%) a share of 25.8% of SOS International A/S, a company providing assistance services to insurance companies.

The Parent Company If P&C Insurance Holding owns a share of 34.0% of Boalliansen AS, which provides various services to housing associations, and 34.0% of Digiconsept AS, which owns the intellectual property rights to Boalliansen AS. Boalliansen AS mediates insurances on behalf of If P&C Insurance Ltd (publ).

Relations with Sampo

Relations with Sampo refer to Sampo plc and all companies in this corporate group with the exception of If P&C Insurance Holding and its subsidiaries.

If has concluded agreements with a Sampo subsidiary regarding the marketing of the counterparty's products in If's networks in primarily Finland and the Baltic countries. If pays a a commission for the services.

In Finland and the Baltic countries, Sampo or its subsidiaries have also concluded P&C insurance agreements with If.

Sampo's purchase of data-processing services and data production is conducted through If IT Services A/S, which has monitoring and administrative responsibility for IT operations with the suppliers.

If and Sampo have had an asset management agreement according to which all investment decisions, within the framework of the Investment Policy, were outsourced to Sampo. If paid a fixed percentage commission calculated on the market value of the managed investment assets. Since September 2021 the agreement has been replaced with an asset management agreement with a more limited scope between If P&C Insurance Ltd (publ) and a subsidiary to Sampo. The compensation is calculated in a similar manner.

In Finland, Sampo and Sampo subsidiaries purchase internal audit services, HR services, as well as, other office services and investigation services from If. Sampo and Sampo subsidiaries pay a fee for the services.

Office premises and services are partly used together with Sampo.

Topdanmark A/S is a subsidiary of Sampo plc. Under the Danish Corporate Income Tax Act, the If Group and the Topdanmark Group are subject to mandatory joint taxation in Denmark. Topdanmark A/S is the administration company for the Danish joint taxation but the companies have a joint and several liability.

If P&C Insurance Ltd (publ) holds subordinated loans issued by Topdanmark A/S and a subsidiary of Topdanmark A/S.

In Finland, If Services AB mediates insurances on behalf of Sampo subsidiaries.

Relations with Nordea

Nordea Bank plc is an associate to Sampo, and consequently a related company to If. Relations with Nordea refer to Nordea Bank plc and all the companies in this corporate group.

Nordea is If's banking partner in Sweden, Finland, Denmark, Norway and the United Kingdom and agreements have been concluded covering the management of bank accounts and related services. The Parent Company, If P&C Insurance Holding, is the primary account holder in the Nordic cash pool in Nordea. The subsidiaries of If P&C Insurance Holding also have their own accounts with Nordea.

In asset management, investments are made in bonds and other interest-bearing securities issued by Nordea companies as well as in deposits with Nordea. Nordea is also included among the market makers used for general securities trading. Nordea is furthermore a counterparty for transactions in interest rate and currency derivatives. Further information on this matter is provided in Note 5, Table 15.

Nordea distributes If's P&C insurance products through its banking offices in Sweden and Finland as well as via the Internet, for which they are paid a commission.

In Finland, If's subsidiary If P&C Insurance Ltd (publ) has written P&C insurance policies with Nordea.

Note 5 – Risks and risk management

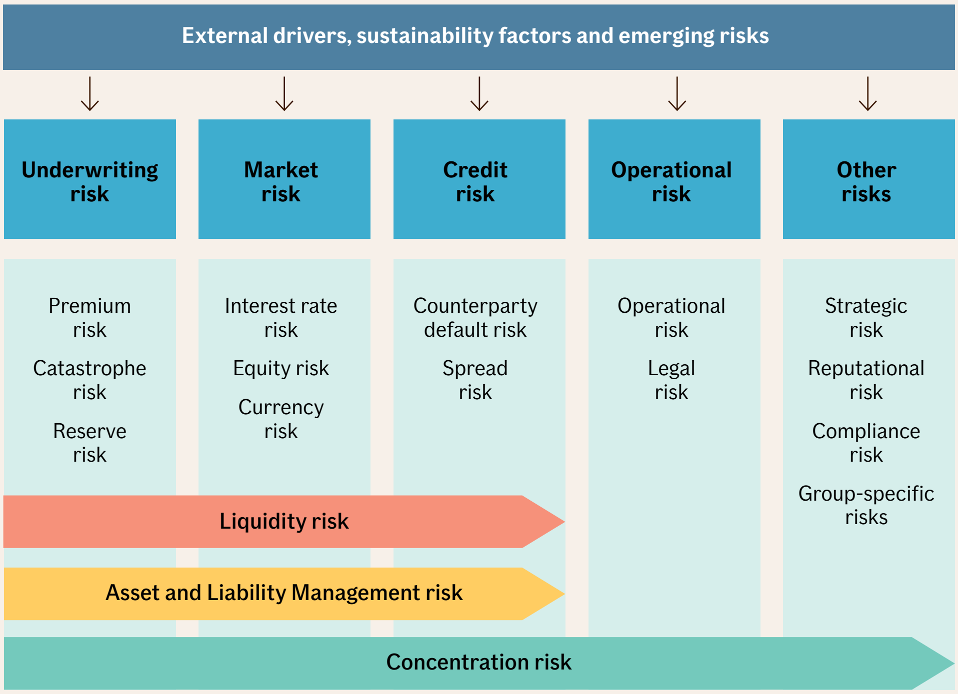
Risk Management System

Risks and risk management are an essential and inherent element of If's business activities and operating environment. A high-quality risk management process is a prerequisite for running the business effectively and achieving established goals. The objectives of the Risk Management System are to create value for the stakeholders by securing long-term solvency, minimizing the risk of unexpected financial loss and giving input to business decisions by taking into account the effect on risks and capital. If's risk appetite framework defines the boundaries for what level of risk If is willing to accept in the pursuit of the objectives. The framework includes the risk appetite statement, capital adequacy, steering documents, processes and controls.

The Risk Management System comprises strategies, processes and reporting procedures necessary to continuously identify, assess, measure, manage, monitor and report risks. As a part of the larger Internal Control System, the Risk Management System ensures that all risks are managed from a group-wide perspective as well as from a legal entity perspective. The risk categories are: underwriting risk, market risk, credit risk, operational risk and other risks. External drivers, sustainability factors and emerging risks have a potential impact on all risk categories, see Figure 1. Each key risk is subject to a dedicated risk management process. Within the Risk Management System, sustainability-related risks, such as climate risks, are not assessed and reported as a stand-alone risk category. Instead, the risks are assessed as an integrated part of the assessments per defined risk category.

Steering documents are in place for each risk area specifying restrictions and limits chosen to reflect and ensure that the risk level at all times complies with the overall risk appetite and capital constraints.

Figure 1 – Risks encompassed in the Risk Management System



Risk strategy

The Risk Management Policy defines the overall risk strategy and the risk appetite for the main risks. The risk management strategies are to:

- ensure strong governance structure to optimize development and maintenance;
- ensure a sound and well-established internal control and risk culture;
- ensure adequacy of capital in relation to risks and risk appetite;
- limit fluctuations in the economic values of group companies;
- ensure strong financial data management;
- ensure that risks affecting the income statement and the balance sheet are identified, assessed, managed, monitored and reported;
- ensure that the riskiness of the insurance business is reflected in the pricing;
- ensure adequate long-term investment returns within set risk levels;
- ensure well working and efficient reporting processes compliant with external and internal requirements; and
- safeguard the reputation and ensure that customers and other stakeholders have confidence in If.

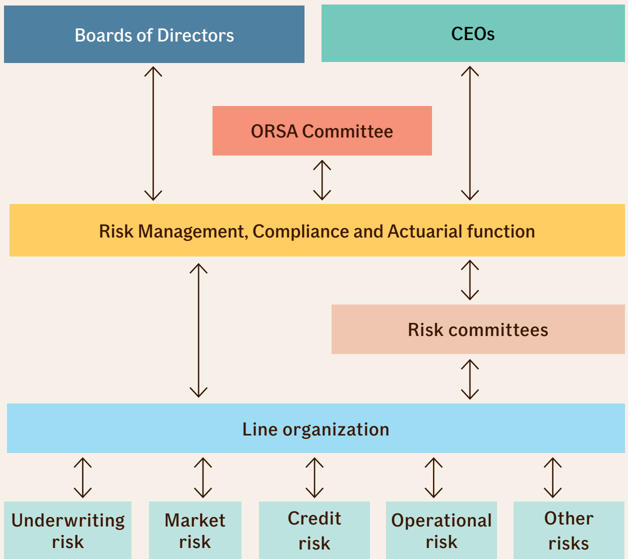
Risk management process

The overall risk management process includes five main steps: risk identification, risk assessment/measuring, risk monitoring, risk managing and reporting. When risks are identified and assessed, sustainability aspects should also be considered.

Reporting structure and risk governance

Figure 2 illustrates the reporting structure within the Risk Management System. The system includes processes and activities including committees, functions and the line organization.

Figure 2 – Risk management reporting structure



Boards of Directors

The Boards of Directors are the corporate bodies responsible for risk control, internal control, and for ensuring that If has appropriate risk management systems and processes. The Boards of Directors approve the yearly Risk Management Policy and other risk-steering documents.

CEOs

The Chief Executive Officers (CEOs) are responsible for organizing and overseeing the daily business activities in accordance with instructions and guidelines from the Boards of Directors. The CEOs have the ultimate responsibility for the effective implementation of the Risk Management System by ensuring appropriate risk management set-up and promoting a sound risk culture.

Committees in the Risk Management System

The Own Risk and Solvency Assessment Committee (ORSA Committee) assists the CEOs in fulfilling the responsibility of overseeing the Risk Management System. The committee also reviews the effectiveness of If's Internal Control System, as well as initiates and monitors efforts and actions relating to these areas. Furthermore, the ORSA Committee monitors that the short-term and long-term aggregated risk profile is aligned with the risk strategy and capital requirements. The committee meets at least four times a year.

There are also additional committees in place for key risk areas. These committees have the responsibility to monitor that risks are managed and controlled as decided by the Boards of Directors. The chairmen of the committees are responsible for the reporting to the ORSA Committee. The committees also monitor the effectiveness of the steering documents and give input with respect to changes and updates, if needed. None of the committees have any decision-making mandate.

Risk Management function

The Risk Management function facilitates the implementation and development of the Risk Management System and consists of the CRO, the Risk Control unit and the Capital Management unit. The function is responsible for coordinating the risk management activities on behalf of the Boards of Directors and the CEOs.

Compliance function

The Compliance function is headed by the Chief Compliance Officer and is responsible for reporting to the Boards of Directors and the CEOs on compliance with the rules relevant for the license to conduct insurance business.

Actuarial function

The Actuarial function is headed by the Chief Actuary who advises on actuarial matters and fulfils tasks according to set instructions. The Actuarial function reports to the Boards of Directors and to the CEOs.

Line organization

The line organization has the day-to-day responsibility for identifying and managing risks within limits and restrictions set by the risk policies, guidelines and instructions and has to ensure that it has resources and tools in place. On behalf of the Heads of the business areas/support functions, a risk coordinator structure is established. The Head of the Risk Control and Reporting unit issues instructions describing the responsibility of the risk coordinators. The line organization has an obligation to inform the Risk Management function of material risks according to the instructions.

Capital management

If focuses on capital efficiency and sound risk management by keeping its capital resources at an appropriate level in relation to the risks taken over the business planning horizon. This means ensuring that the available capital exceeds the internal and regulatory capital requirements, as well as making sure that If P&C Insurance Ltd (publ) within the Group maintains an A rating from Standard & Poor's and Moody's.

Capital management is based on a risk-appetite statement, as well as risk preferences and risk tolerances decided by the Boards of Directors. The risk profile, capital requirements and available capital are measured, analyzed and reported to the ORSA Committee and the Boards of Directors on a quarterly basis, or more often when deemed necessary. In order to maintain a sufficient level of capital, If:

- projects its risks and capital according to the financial plan;
- allocates capital to business areas and lines of business, ensuring that a risk-based approach is used for target setting and profitability evaluation; and
- assures its dividend capacity through the effective use of reinsurance, group synergies and diversification benefits.

Risk and capital modelling

In order to assess the overall risk profile, the interrelationships between various risks is considered, since some of these risks could develop in opposite directions creating diversification effects. For this purpose, If has an internal model to calculate economic capital for underwriting risk and market risk. Through simulations of both insurance and investment operations, the effect of for example reinsurance structures and investment allocations is analyzed.

In addition to the calculation and reporting of economic capital, the internal model is used as a basis for decision making regarding:

- allocation of capital to business areas and lines of business;
- evaluation of the effect on the risk profile related to changes in the investment portfolio;
- evaluation of reinsurance programs;
- evaluation of the Investment Policies and limits; and
- evaluation of risks over the business planning horizon.

Operational risks and less material risks are quantified using the Solvency II standard formula.

Capital position

The capital position is the relationship between available capital and required capital. To fulfill requirements from various stakeholders, different measures are used to describe the capital position: regulatory measures, internal economic measures and rating agency measures. If considers both a one-year and a multi-year perspective.

Regulatory measures

Insurance is a regulated business with EU-wide rules for calculating capital requirements and available capital. All insurance companies within If fulfilled the regulatory solvency capital requirements (SCR) during 2021.

As a subsidiary of Sampo plc, If P&C Insurance Holding Ltd (publ) is a member of the Sampo insurance Group and is, as a holding company, not subject to a formal requirement to report its sub-group solvency position.

Internal economic measures

Economic capital is an internal measure showing the deviation from the expected result calculated at a confidence level corresponding to 99.5% on a one-year horizon. The major quantifiable risks are included in the calculation of economic capital. The calculations are based on an economic, market-consistent valuation.

Rating agency measures

If P&C Insurance Ltd (publ) within the Group is A+ rated by Standard & Poor's and A1 rated by Moody's. The objective is to retain a single A rating.

Risks

Underwriting risk

Underwriting risk refers to the risk of loss, or of adverse change in the value of insurance liabilities, due to uncertainty in pricing and provisioning assumptions.

Premium risk and catastrophe risk

Premium risk refers to the risk of loss, or of adverse change in the value of insurance liabilities, resulting from fluctuations in the timing, frequency and severity of insured events that have not occurred at the balance date.

Catastrophe risk refers to the risk of loss, or of adverse change in the value of insurance liabilities, resulting from significant uncertainty of pricing and provisioning assumptions related to extreme or exceptional events.

Risk exposure

There is a risk, given the inherent uncertainty of P&C insurance, of losses due to unexpectedly high claims costs. Examples of what could lead to high claims costs include large fires and natural catastrophes or an unforeseen increase in the frequency or the average size of small and medium-sized claims.

If underwrites insurance policies in the Nordic and Baltic countries. In addition, If underwrites policies for Nordic clients with operations outside the Nordic region. The geographical distribution of premium income is shown in Figure 3.

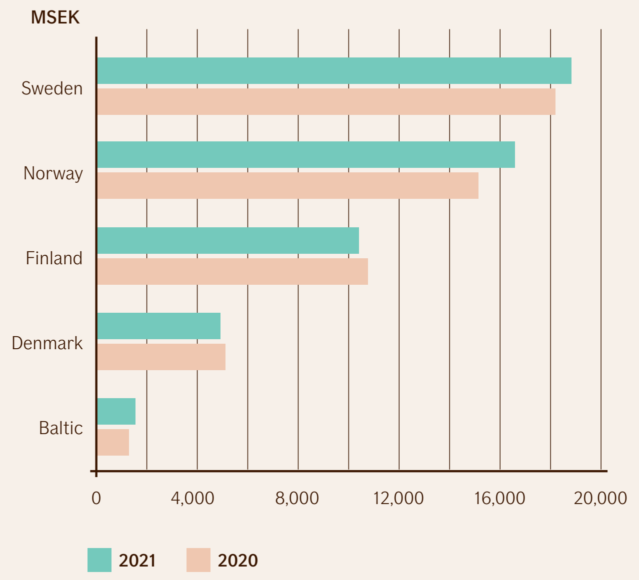
Risk management and control

The principal methods for mitigating premium risks are by reinsurance, diversification, prudent underwriting and regular follow-ups linked to the strategy and financial planning process. The Underwriting Policy sets general principles, restrictions and directions for the underwriting activities. The Underwriting Policy is supplemented with guidelines outlining in greater detail how to conduct underwriting within each business area.

The Reinsurance Policy stipulates guidelines for the purchase of reinsurance. The optimal choice of reinsurance is evaluated by comparing the expected cost versus the benefit of the reinsurance, the impact on result volatility and capital requirement. The main tool for this evaluation is the internal model in which small claims, large claims and natural catastrophes are modelled. The Reinsurance Policy includes limitations on permitted reinsurers and their rating for each line of business. In addition, limits relating to concentration risk and exposure to reinsurance risk are included. The reinsurers are continuously assessed and evaluated through own financial and qualitative pre-defined analyses.

A group-wide reinsurance program has been in place in If since 2003. In 2021, retention levels were between MSEK 100 and MSEK 250 per risk and MSEK 250 per event.

Figure 3 – Premium income per geographical area



An analysis of how changes in the combined ratio, premium and claims level affect the result before tax is presented in Table 1.

Table 1 – Sensitivity analysis, premium risk

MSEK			Effect on result before tax	
Parameter	**Level, 2021**	**Change**	**2021**	**2020**
Combined ratio, Business Area Private	78.6%	+/- 1 percentage point	+/- 291	+/- 282
Combined ratio, Business Area Commercial	83.2%	+/- 1 percentage point	+/- 128	+/- 125
Combined ratio, Business Area Industrial	93.4%	+/- 1 percentage point	+/- 49	+/- 49
Combined ratio, Business Area Baltic	86.8%	+/- 1 percentage point	+/- 16	+/- 16
Premium level	48,418	+/- 1%	+/- 484	+/- 470
Claims level	31,717	+/- 1%	+/- 317	+/- 312

Reserve risk

Reserve risk refers to the risk of loss, or of adverse change in the value of insurance liabilities, resulting from fluctuations in the timing and amount of claims settlements for events that have occurred at, or prior to, the balance date.

Reserve risk includes revision risk, which refers to the risk of loss, or of adverse change in the value of insurance liabilities, resulting from fluctuations in the level, trend, or volatility of revision rates applied to annuities, due to changes in the legal environment or in the state of health of the person insured.

Technical provisions always include a degree of uncertainty since the provisions are based on estimates of the size and the frequency of future claims payments.

The uncertainty of technical provisions is normally greater for new portfolios for which complete run-off statistics are not yet available, and for portfolios including claims that take a long time to settle. Workers' Compensation, Motor Third Party Liability, Personal Accident and Liability insurance are products with the latter characteristics.

Risk exposure

For lines of businesses such as Motor Third Party Liability and Workers' Compensation, legislation differs significantly between countries. Some of the provisions for these lines include annuities that are sensitive to changes in inflation, retirement age, mortality assumptions and discount rates. In 2021, the proportion of technical provisions related to Motor Third Party Liability and Workers' Compensation was 48% (51). The amount of technical provisions broken down by product and geagraphical area is shown in Table 2.

Risk management and control

The Boards of Directors decide on the guidelines governing the calculation of technical provisions. The Chief Actuary is responsible for developing and presenting guidelines on how the technical provisions are to be calculated and for assessing whether the level of the total provisions is sufficient.

The actuarial estimates are based on historical claims data and exposures that are available at the closing date. Factors that are considered include loss development trends, the level of unpaid claims, changes in legislation, case law and economic conditions. When setting provisions, established actuarial methods are generally used, combined with projections of the number of claims and average claims costs.

The provisions for annuities are calculated as discounted values based on the amounts and payment periodicity in each individual case, taking expected investment income, expenses, indexation, other possible adjustments and mortality into account. The anticipated inflation trend is taken into account when calculating the technical provisions and is of high importance for claims settled over a long period of time, such as claims related to Motor Third Party Liability and Workers' Compensation. The anticipated trend is based on external assessments of the inflation trend in various areas, such as the consumer price index and payroll index, combined with own estimations of costs for various types of claims.

Table 2 – Technical provisions (net) per product and geographical area

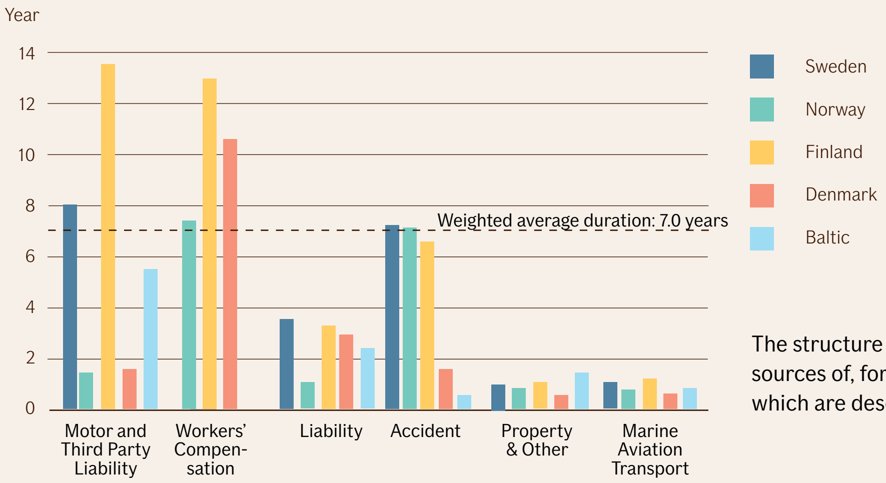
The durations of technical provisions for various products are shown in Figure 4.

Figure 4 – Duration of technical provisions 2021



The structure and duration of technical provisions are also sources of, for example, interest rate risk and inflation risk, which are described in greater detail under market risk.

A sensitivity analysis of the reserve risk is presented in Table 3. The result of changes in the technical provisions will be a corresponding change in claims incurred.

Table 3 – Sensitivity analysis, reserve risk

Portfolio	Risk	Change in risk parameter	Country	2021 Effect MSEK	2020 Effect MSEK
Nominal reserves	Inflation increase	Increase by 1 percentage point	Sweden	1,381	1,403
			Denmark	197	187
			Norway	648	370
			Finland	421	389
Discounted reserves, including annuities and estimated share of claims reserves to future annuities	Decrease in discount rate	Decrease by 1 percentage point	Sweden	1,003	686
			Denmark	218	181
			Finland	3,210	3,137
Annuities and estimated share of claims reserves to future annuities	Decrease in mortality	Life expectancy increase by 1 year	Sweden	157	243
			Denmark	10	18
			Finland	788	813

Financial assets and liabilities

The recognition of financial assets and liabilities depends on their classification.

Table 4 – Categories of financial assets and financial liabilities

MSEK	2021	2020
Financial assets at fair value		
Financial assets, mandatory at fair value through profit or loss (trading)	176	129
Financial assets, available for sale	110,397	106,435
Loans and receivables [1]	26,363	22,877
Total financial assets	**136,936**	**129,441**
Financial liabilities, mandatory at fair value through profit or loss (trading)	78	446
Financial liabilities measured at amortized cost or at the amount expected to be settled [2]	11,855	13,055
Total financial liabilities	**11,932**	**13,501**

[1] Loans and receivables consist of the following balance sheet items: loans and receivables, deposits with ceding undertakings, receivables, cash and bank, collaterals and securities settlement claims and financial accrued income.

[2] Financial liabilities measured at amortized cost or at the amount expected to be settled consist of the following balance sheet items: subordinated debt, creditors arising out of direct insurance and reinsurance operations, lease liabilities, securities settlement liabilities, other financial creditors and accrued financial expenses.

Table 5 – Investment assets categorized from an asset management perspective

	Investment assets and derivative liabilities		Assets under active management		Assets under active management categorized from an asset management perspective					
					Fixed income		Equity		Properties

[1] Only fixed income and equity derivatives are included in the assets categorized from an asset management perspective. Excluded currency derivatives amounted to MSEK 170 (129).

[2] Only fixed income and equity derivatives are included in the liabilities categorized from an asset management perspective. Excluded currency derivatives amounted to MSEK 78 (436).

Market risk

Market risk refers to the risk of loss, or of adverse changes in the financial situation resulting, directly or indirectly, from fluctuations in the level or in the volatility of market prices of assets and liabilities.

Risk exposure

The investment operations generated a return of 4.3% (2.3) in 2021. Investment assets amounted to MSEK 119,095 (112,590), as presented in table 5. The main market risks are interest rate risk, equity risk and currency risk. The exposure towards market risk can be described through the allocation of investment assets and the sensitivity of their values to changes in underlying market variables.

During the year, the proportion of equity investments increased to 14% (11). The proportion of fixed income investments decreased to 86% (89). Other investment assets amounted to 0% (0) at December 31, 2021.

Table 6 shows the sensitivity analysis of the fair values of financial assets and liabilities in different market scenarios. The effects represent the immediate impact on fair values as a result of changes in the underlying market variables as per December 31 each year. The sensitivity analysis includes the effects of derivative positions and is calculated before tax.

Risk management and control

The Investment Policy is the principal document for managing market risks. It sets guiding principles for, inter alia, the prudent person principle, specific risk restrictions and a decision-making structure for the investment activities.

The structure and nature of the technical provisions, the overall risk appetite, risk tolerance, regulatory requirements and rating targets are taken into account when deciding limits and when setting return and liquidity targets. The Boards of Directors decides on the Investment Policy once a year or more often if deemed necessary. The Investment Policy specifies guidelines defining mandates and authorizations and guidelines on the use of derivatives. The market risk is actively monitored and controlled by the Investment Control Committee and reported to the ORSA Committee.

Table 6 – Sensitivity analysis of the fair values of financial assets and liabilities

	2021				2020			
	Interest rate		Equities	Properties	Interest rate		Equities	Properties

Effect recognised in profit/loss	**-23**	**22**	**0**	**-2**	**-38**	**36**	**0**	**-7**
Effect recognised in equity	**1,195**	**-1,148**	**-3,402**	**-2**	**1,519**	**-1,453**	**-2,640**	**-7**

Interest rate risk

Interest rate risk refers to the sensitivity of the values of assets and liabilities instruments to changes in the term structure of interest rates, or in the volatility of interest rates.

Risk exposure

Since the technical provisions are predominantly stated in nominal terms in the balance sheet, If is mainly exposed to changes in future inflation. However, the economic value of these provisions, meaning the present value of future claims payments, is exposed to changes in interest rates. Furthermore, the provisions for annuities are discounted and potential changes in discount rates affect the level of technical provisions.

The discount rates could vary between countries mainly as a result of legislative differences, but also due to the prevailing interest rate environment.

The duration of provisions and thus sensitivity to changes in interest rates is analyzed in greater detail in Figure 4 and Table 3, in the reserve risk section. The duration of fixed income investments was at year-end 2021 1.1 (1.4). The duration of fixed income investments is shown in Table 7.

Following the financial crisis, the reform and replacement of benchmark interest rates has become a priority for global regulators. However, there remains some uncertainty around the timing and precise nature of these changes.

The impact of IBOR reform is insignificant insofar as If has only few instruments that reference to GBP LIBOR and USD LIBOR. As per December 31, 2021 If's risk exposure that was directly affected by the interest rate benchmark reform predominantly comprised the investment instruments of MSEK 1,784 or 1.6% of the investment portfolio. These instruments are measured at amortised cost and accounted for as available for sale or loans and receivables. As per December 31, 2021 If replaced the reference interest rate only for one financial instrument amounting to MSEK 36 in accordance with the requirements in the IBOR reform.

The Group currently has a significant number of contracts which reference to Nordic IBORs and EURIBOR. As these benchmark interest rates remain in the foreseeable future no financial impact is expected yet. If follows the development of these interest rates and continuously assesses the impact on its operations and accounting.

Risk management and control

In accordance with the Investment Policy, the nature of the insurance commitments with respect to interest rate risk and inflation risk is taken into account in the composition of investment assets. The overall interest rate risk is managed by sensitivity limits for instruments sensitive to interest rate changes.

Table 7 – Duration and breakdown of fixed income investments per instrument type

	2021			202		
MSEK **Instrument type** [1]	**Carrying amount**	**%**	**Duration**	**Carrying amount**	**%**	**Duration**
Short-term fixed income	11,953	11.7	0.1	5,176	5.2	0.0
Scandinavia, long-term government and corporate securities	68,339	67.0	0.8	73,162	73.4	1.0
Scandinavia, index-linked bonds	5,088	5.0	6.3	3,184	3.2	9.3

Global, long-term government and corporate securities	1,467	1.4	1.8	1,562	1.6	2.5
Total	**101,983**	**100**	**1.1**	**99,663**	**100**	**1.4**

[1] IR Derivatives are included in the table.

Equity risk

Equity risk refers to the sensitivity of the values of assets and liabilities to changes in the level or in the volatility of market prices of equities.

Risk exposure

The equity portfolio consists of Nordic shares and a diversified global fund portfolio. At year-end, the exposure amounted to MSEK 17,011 (13,200) and the proportion of equities in the investment portfolio was 14% (11).

Risk management and control

The equity portfolio is actively managed with a long-term investment horizon. The equity risk is reduced by diversifying the investments across industry sectors and geographical areas. According to the Investment Policy, equity investments may not exceed 16.5% of the total investment portfolio and the exposure towards an individual issuer is to be limited.

Table 8 – Breakdown of equity investments by industry sectors

	2021		2020	
MSEK	**Carrying amount**	**%**	**Carrying amount**	**%**
Industrials	5,632	46.5	4,461	49.6

Norway	1,318	7.8	987	7.6
North America	1,174	6.9	826	6.3
Latin America	278	1.6	402	3.1
Denmark	2	0.0	2	0.0
Total	**16,972**	**100**	**13,064**	**100.0**

The geographical allocation of equity excludes investments made through private equity funds of MSEK 39 (136).

Currency risk

Currency risk refers to the sensitivity of the values of assets and liabilities to changes in the level or the volatility of currency exchange rates.

Risk exposure

The currency positions and the sensitivity of the valuation to changes in exchange rates are shown in Table 10.

Risk management and control

The currency risk is reduced by matching technical provisions with investment assets in the corresponding currencies or by using currency derivatives. The currency exposure in the insurance operations is hedged to the presentation currency on a regular basis. The currency exposure in investment assets is controlled weekly and is hedged when the exposure reaches a specified level, which is set with respect to cost efficiency and minimum transaction size. If is also exposed to translation risk, which is described in more detail in the group-specific risks section.

Table 10 – Currency risk

MSEK **Currency 2021**	**EUR**	**NOK**	**DKK**	**GBP**	**USD**	**JPY**	**Other**

Credit risk

Credit risk refers to the risk of loss or of adverse change in the financial situation, resulting from fluctuations in the credit standing of issuers of securities or any counterparties which insurance undertakings are exposed to in the form of spread risk, counterparty default risk or market risk concentrations.

Spread risk refers to the sensitivity of the values of assets and liabilities to changes in the level or in the volatility of credit spreads over the risk-free interest rate term structure.

In general, counterparty delfault risk refers to losses arising from occurred defaults of counterparties or from increases in assumed probability of defaults. In the case of default, the final loss depends on the value of the asset less any collateral and recoveries at the time of default.

Credit risk in investment operations

Credit risk in the investment operations can be measured as spread risk and counterparty default risk. In most cases, part of the credit risk is already reflected through a higher spread and thereby the asset has a lower market value, even in the case of no default. Accordingly, the spread is essentially the market price of credit risk.

Additional risks, stemming either from lack of diversification in the asset portfolio or from a large exposure to default risk by a single issuer of securities or a group of related issuers not captured by the spread risk or counterparty default risk, are measured as concentration risk.

Risk exposure

The most significant credit risk exposures arise from fixed income investments. The exposures are shown by sector, asset class and rating category in Table 11.

Risk management and control

Credit risk in the investment operations is managed by specific limits stipulated in the Investment Policy. In the policy, limits are set for maximum exposures towards single issuers, type of debt category and per rating class. The spread risk is further limited by sensitivity limits for instruments sensitive to spread changes.

Before investing, potential investments are analyzed thoroughly. The creditworthiness and outlook of the issuer are assessed together with any collateral as well as structural details of the potential investment. Internal risk indicators are important factors in the assessment, although macroeconomic environment, current market trends and external opinions of analysts and credit ratings by rating agencies are also taken into account. In addition, portfolio performance and the counterparties' credit standings are monitored continuously.

The development of the portfolios with respect to credit risk is monitored at company level, as well as at group level, and reported to the Investment Control Committee and the ORSA Committee. Credit exposures are reported by ratings, instrument types and industry sector.

[1] Other derivatives and collaterals are excluded.

Credit risk in reinsurance operations

In addition to the credit risk associated with investment assets, credit risk arises from insurance operations, most importantly through ceded reinsurance. Credit risk related to reinsurers arises through reinsurance receivables and through the reinsurers' portion of claims outstanding. Credit risk exposure towards policyholders is very limited, since non-payment of premiums generally results in the cancellation of insurance policies.

Risk exposure

The distribution of recoverables and receivables concerning ceded reinsurance is presented in Table 12. In the table, MSEK 1,845 (1,557) is excluded, which mainly relates to captives and statutory pool solutions.

Table 12 – Reinsurance recoverables

MSEK Rating (S&P)	2021	%	2020	%
AA	864	49.7	703	44.1
A	869	50.0	889	55.8
BBB	-	-	-	-
Not rated	5	0.3	3	0.2
Total	**1,739**	**100**	**1,595**	**100**

Risk management and control

To limit and control credit risk associated with ceded reinsurance, the Reinsurance Policy sets requirements for the reinsurers' minimum credit ratings and the maximum exposure to individual reinsurers. Credit ratings from rating agencies are used to determine the creditworthiness of reinsurance companies.

The distribution of ceded treaty and facultative premiums per rating category is presented in Table 13.

Table 13 – Ceded treaty and facultative reinsurance premiums per rating category

MSEK Rating (S&P)	2021	%	2020	%
AA	433	54.0	354	57.8
A	370	46.0	258	42.2
Total	**803**	**100**	**612**	**100**

Asset and Liability Management risk

Asset and Liability Management (ALM) risk refers to the risk of loss, or of adverse change in the financial situation resulting from a mismatch between the assets' and the liabilities' sensitivity to fluctuations in the level or in the volatility of market rates.

Risk management and control

ALM is taken into account through the risk appetite framework and is governed by the Investment Policies.

Most of the technical provisions are nominal, while a significant portion, namely the annuity and annuity IBNR reserves, are discounted using interest rates in accordance with the regulatory rules. Accordingly, from an accounting perspective, If is mainly exposed to changes in regulatory discount rates and inflation expectations.

From an economic perspective, wherein the technical provisions are discounted using prevailing interest rates, If is exposed to changes in inflation and nominal interest rates.

To maintain the ALM risk within the overall risk appetite, the technical provisions may be matched by investing in fixed income instruments and by using currency derivatives.

Liquidity risk

Liquidity risk refers to the risk of being unable to realize investments and other assets in order to settle financial obligations when they fall due.

Risk exposure

The maturities of cash flows for technical provisions, financial assets and liabilities are presented in Table 14. In the table, financial assets and liabilities are divided into contracts with a contractual maturity profile, and other contracts. The table also shows expected cash flows for net technical provisions, which are inherently associated with a degree of uncertainty.

Risk management and control

In P&C insurance, premiums are collected in advance and large claims payments are usually known long before they fall due, thus limiting the liquidity risk.

The Cash Management unit is responsible for the liquidity planning. To identify liquidity risk, expected cash flows from investment assets and technical provisions are analyzed regularly, taking both normal market conditions and stressed conditions into consideration. Liquidity risk is reduced by investing in assets that are readily marketable in liquid markets. The available liquidity of financial assets, meaning the part of the assets that can be converted into cash at a specific point in time, is analyzed and reported continuously.

Table 14 – Maturities of cash flows for financial assets, liabilities and net technical provisions

				Cash flows

Concentration risk

Concentration risk refers to the total exposure towards a single issuer of securities or a group of related issuers, industry, sector or geographical area.

Risk exposure

Investments are mainly concentrated to the financial sector in the Scandinavian countries. The largest market and credit risk concentrations related to a single issuer of securities or a group of related issuers and asset classes are shown in Table 15. Concentrations to industry, sector or geographical area are shown in Table 8, 9 and 11.

Reinsurers share of the ten largest individual reinsurance recoverable balances amounted to MSEK 1,923 (1,712), representing 54% (54) of the total reinsurance recoverables. Out of the ten largest reinsurance recoverables, 32% (37) of the reinsurers had an A rating or higher, while the rest were from non-rated captives.

Risk management and control

In the Underwriting Policy, Reinsurance Policy and Investment Policy, limits are set for maximum exposures towards single issuers or group of related issuers and per rating class. Risk concentrations are actively monitored and controlled by the respective committee and reported to the ORSA Committee.

Table 15 – Concentration of market and credit risks in individual counterparties and asset classes 2021

MSEK Fair value	Equities	Covered bonds	Other long-term fixed income	Short-term fixed income	Positive fair values of derivatives	Total
Nordea Bank plc	-	3,882	2,258	3,090	-	**9,229**

Nykredit A/S	-	1,388	508	-	-	**1,896**
Total top ten exposures	**1,615**	**11,138**	**22,421**	**3,115**	**-**	**38,289**

The ten largest exposures amount to MSEK 38,289 (39,402), representing 32% (35) of the investment assets under active management.

Operational risk

Operational risk refers to the risk of loss arising from inadequate or failed processes or systems, from personnel, or from external events (expected or unexpected). The definition also includes legal risk, which refers to the risk of loss due to disputes not related to insurance claims, breach of contract or entry into illegal contracts or breach of intellectual property rights.

Operational risks occur in all parts of the organization and are a natural part of the business. It is not cost-effective to eliminate all operational risks and therefore the level of risk mitigation needs to be balanced. Managers within the line organization are the risk owners and responsible for continuously managing significant risks within their operations to an acceptable level.

Risk exposure

Assessment of operational risk is performed through the qualitative Operational and Compliance Risk Assessment (OCRA) process. In this process, operational risks are identified, assessed, managed, monitored and reported regularly. Identified risks are assessed from a likelihood and impact perspective and evaluated using a traffic light system. An operational risk coordinator network in the line organization supports the risk owners in the OCRA process while the results are challenged and aggregated by the Risk Management function. The most significant risks are reported to the Operational Risk Committee, the ORSA Committee and to the Board of Directors. If has a system for incident reporting procedures and follow-up. Incident data is used to analyze risk and severe incidents are tracked to ensure that proper actions are taken.

Main operational risks are related to internal, customer and partner processes and are driven by core system transition, old legacy systems and complex processes. To manage these risks there is a plan for a new core system strategy to enable efficient transition to new systems, a changed governance and management structure and standardized routines to meet new demands. Other operational risks are related to inadequate system functionality due to increased complexity and limited resources for system development. Furthermore, information security is significant within the operational risk area related to the risk of insufficient information protection and insufficient cyber protection and resilience. Examples of risk mitigating activities are the Identity and Access Management project for governing identities and accesses and the Access Logging project, improving incident response from alerts in security tools and threat hunting activities.

Risk management and control

There is a number of steering documents that are relevant for the management of operational risk. These include, but are not limited to, the Operational Risk Policy, Business Continuity and Security Policy and Information Security Policy. There are also processes and instructions in place to manage the risk of external and internal fraud. Internal training on ethical rules and guidelines is provided to employees on a regular basis. Policies and other internal steering documents are reviewed and updated on a regular basis.

Other Risks

Strategic risk

Strategic risk refers to the risk of loss due to changes in the competitive environment, changes in the overall economic climate or internal inflexibility.

Risk management and control

Strategic risk relates to changes in the operational environment and the capability to adjust to the changes in relation to the strategy and financial planning process. The most likely strategic risks are related to competition, macroeconomic, regulatory and other external factors. These risks are controlled and mitigated through continuous monitoring of competitors, of the market and of regulatory changes.

The Corporate Strategy unit is responsible for coordinating strategic risk assessments. The strategy process takes place annually and includes setting high-level objectives and translating these into detailed short-term business plans. The strategy process also includes a risk assessment update whenever larger changes occur. An overall assessment by the Corporate Strategy unit is reported to the ORSA Committee.

Compliance risk

Compliance risk refers to the risk of legal or regulatory sanctions, material financial losses or loss to reputation as a result of not complying with applicable rules.

Risk management and control

The Compliance function is responsible for ensuring that there are effective processes for identifying, assessing, mitigating, monitoring and reporting compliance risk exposure. Compliance risks are identified and assessed in the OCRA process. The most important compliance risks are reported to the ORSA Committee and to the Boards of Directors.

Compliance incidents are reported by the business in the incident reporting tool and are followed up by the Compliance function. Incident data is used to analyze risks and severe incidents are investigated to ensure that appropriate actions are taken.

There is a number of steering documents that are relevant for the management of compliance risks, for example the Compliance Policy, the Risk Management Policy, the Ethics Policy and the AML/CTF Policy.

Internal training on important rules and guidelines is provided to employees on a regular basis. Policies and other internal steering documents are reviewed and updated at least annually.

Reputational risk

Reputational risk is often a consequence of a materialized operational or compliance risk and refers to the risk of damage to the company through deterioration of its reputation among customers and other stakeholders.

A good reputation is vital for an insurance company, which means that trust is an important factor in the relationship with customers, investors, employees and other stakeholders. If’s reputation is determined by how stakeholders perceive the Group in all aspects.

Risk management and control

When assessing operational and compliance risks in the organization, a deteriorated reputation as a consequence of a materialized risk is taken into account. Reputational risk is assessed from an impact and likelihood perspective. Identified reputational risk is managed by the organization and in some cases by the Communication Department. An aggregated reputational risk assessment is reported to the Operational Risk Committee.

Some processes are especially sensitive to reputational risk, such as marketing and claims handling. Individual incidents can also receive high attention in media. Professional handling and communication are key to mitigate the risk. There are established procedures for customer complaints and incident reporting. If also provides training for employees in ethical guidelines and how potential reputational risks should be handled. What is written about If in media is continuously monitored.

Emerging risks

Emerging risks refers to newly developing or changing risks that are difficult to quantify and which may have a major impact on the undertaking.

Risk exposure

Risks that are under extra observation are lack of adaptation to climate changes, Internet of Things (IoT), terrorism and infrastructure blackouts.

Risk management and control

The main principle is that each business area is responsible for identifying and taking action with regard to potential emerging risk exposures in its business. As emerging risks are not considered as a stand-alone risk category they are assessed as an integrated part of the main risk categories. See also Figure 1 – Risks encompassed in the Risk Management System. For example, climate related risks in the insurance business, such as the risk of weather related claims are identified, assessed, managed, monitored and reported in the underwriting process. Due to the risk of a potentially large accumulation of emerging risks that could negatively affect the long-term solvency position, the Emerging Risk Core Team has been established, consisting of key persons from the various business areas. This group follows up and analyzes important emerging risk factors and suggests possible actions. The risks assessed as being most serious are reported to the ORSA Committee by the Emerging risk coordinator.

Group-specific risks

Group-specific risks are risks that are present at company level, but whose impact is significantly different at group level or risks that are only present at group level. Examples of group-specific risks are contagion risk due to intra-group transactions as well as currency risk and translation risk due to the group structure. The intra-group transactions consist of internal reinsurance, internal outsourcing and other services provided under service agreements.

Risk exposure

The only material group-specific risk for If is translation risk. The translation risk refers to the risk that arises when consolidating the financial statements of foreign operations that have a different presentation currency than the Parent Company into the Group’s financial statements.

Risk management and control

If has processes in place for handling these risks and interdependencies through the risk management system. The translation risk is not hedged since those operations and investments are regarded as being of a long-term nature and the currency effects related to them will not affect the income statement.

Notes to the income statement

Note 6 – Result per business area

The Group's operations are controlled and reported primarily in accordance with If's customer groups and operations, which consist of private individuals in Business Area Private, small and medium sized corporate customers in Business Area Commercial, large sized corporates in Business Area Industrial, as well as asset management.

The Private, Commercial and Industrial business areas conduct operations in Sweden, Norway, Denmark and Finland on a pan-Nordic business platform.

The operations in the Baltic countries constitute a separate business area. The business area consists of insurance operations conducted in Estonia, Latvia and Lithuania.

The asset management unit provides centralized management of the Group's investment assets and bank balances. The asset management unit has earnings responsibility for its operations within the investment restrictions regulated in the Group investment policy.

An estimated return on the assets that correspond to technical provisions is transferred from the non-technical account to the technical result for each business area.

Within segment reporting, a separate account is provided in terms of the group-wide operations that If has chosen not to allocate to the Group's established business areas. Within Other, If reports its road assistance, run-off operations and other group-wide operations.

Business area consolidation is implemented, with the exception of asset management, in accordance with the same policies as those applied by the Group. The income statement items, assets and liabilities that are attributed to the various business areas are of an insurance-related nature and constitute the principal operating items. Internal sales among the business areas have only a marginal impact on income and expenses for the various business areas.

[1] Including road assistance, run-off and other operations not allocated to the business areas.

[2] Relating to elimination of transactions between business areas. Additionally, the business area reporting includes all value changes on investment assets in the Investment result. The main principle in the Group is to recognize unrealized gains or losses in Other comprehensive income.

[3] Other debtors and creditors are not divided on the basis of business areas except for those related to asset management.

Operations per geographical area

Revenue by geographic area below is distributed among the countries in which If has companies or branches and corresponds in all material respects to the customers' geographic domicile.

Long-term investments have been distributed directly to the countries where they belong in terms of physical or business domicile.

Business Area Private

Development during the year

The technical result decreased during the year and amounted to MSEK 6,261 (6,801), corresponding to a combined ratio of 78.6% (76.0).

Gross written premiums increased by 3.7% excluding currency effects. Growth was positive in all countries and mainly driven by higher premiums and increased retention.

In total, the claims costs increased compared to the preceding year and the risk ratio deteriorated to 57.3% (54.2). This was partly due to increased motor related claims following the ease of pandemic-related restrictions during the year (still at a lower level than normal), and increased weather-related claims.

The cost ratio amounted to 21.2% (21.8) and total operating expenses increased by 0.9% excluding currency effects.

In 2021, Business Area Private's customer base continued to grow steadily in all countries and now stands at more than 3.2 million households. This development was supported by positive renewal in all countries. At the end of the year Business Area Private's retention was record-high at more than 90%. Development in online services and digital engagement remained good in 2021, following consistent investments into this area over many years. Self-service through My Pages increased by 15% to 11 million logins during the year. Continued strong momentum in digital sales and claims handling, with more than 50% of claims reported online.

Business Area Commercial

Development during the year

The technical result improved during the year and amounted to MSEK 2,208 (1,812), corresponding to a combined ratio of 83.2% (85.8).

Gross written premiums increased by 4.3% excluding currency effects, primarily driven by Norway. Growth was supported by rate actions and a growing customer base with solid renewals of existing customers.

In total, claims costs decreased compared to the preceding year and the risk ratio improved to 61.2% (64.2). This was mainly driven by improved price sophistication and continous work on risk selection during the year. Furthermore, frequency claims continued to be lower than normal due to the pandemic.

The cost ratio amounted to 21.9% (21.6) and total operating expenses increased by 4.9% excluding currency effects.

In 2021, Commercial saw strong momentum in online sales and continued expansion of the digital offering with increased usage of self-service solutions. Online sales in Commercial increased by more than 60% year-on-year, albeit from a modest base.

Business Area Industrial

Development during the year

The technical result amounted to MSEK 342 (−435), corresponding to a combined ratio of 93.4% (109.0).

Gross written premiums increased by 5.4% excluding currency effects, with particularly strong development in Norway and Sweden. This was mainly a result of good customer loyalty, high new sales and profitability measures carried out during the year.

In total, claims costs decreased compared to the preceding year and the risk ratio improved to 74.3% (91.0). This was largely due to a lower large claims outcome than last year. However, severe weather claims developed less favorably during the year, mainly affected by flooding in Europe.

The cost ratio amounted to 19.1% (18.0) and total operating expenses increased by 8.7% excluding currency effects.

In 2021, there was continued focus on efficiency with the development of high-quality online solutions for increased digital engagement and self-service among Industrial customers. Approximately 50% of clients now have access to If Login and of those more than 90% were active users during 2021.

Business Area Baltic

Development during the year

The technical result improved during the year and amounted to MSEK 212 (210), corresponding to a combined ratio of 86.8% (86.6).

Gross written premiums increased by 10.8% excluding currency effects. Growth was strong in all three Baltic countries and supported by a growing customer base and solid renewals of existing customers. Adjustments made to products and pricing due to the changed market conditions following the pandemic also contributed to the GWP increase.

In total, claims costs increased compared to the preceding year which contributed to a deteriorated risk ratio of 58.7% (58.4). The risk ratio was affected by a continued lower claims frequency than normal following the pandemic, particularly in Motor insurance.

The cost ratio amounted to 28.0% (28.2) and total operating expenses increased by 5.4% excluding currency effects.

Asset management

At full market value, profit from asset management increased to MSEK 4,999 (2,548), corresponding to a total return of 4.3% (2.3). Net investment return amounted to MSEK 2,371 (1,529) in the income statement and MSEK 2,628 (1,019) in other comprehensive income.

Total return on equities was 27.3% (11.0). Scandinavian equities performed the best and the Swedish stock market had another strong year in 2021.

Interest-bearing assets gave a total return of 1.7% (1.6). High-yield corporate bonds in particular but also index linked bonds generated a high return.

Asset allocation remained fairly stable. Fixed income comprises 86% (89) and equities 14% (11) of the total investment assets. At year end, the duration of the fixed income assets was 1.1 (1.4).

Return on investment assets [1]	**Fair value Dec 31, 2021 MSEK**	**%**	**Fair value Dec 31, 2020 MSEK**	**%**	**Return 2021 MSEK**	**%**	**Return 2020 MSEK**	**%**

[1] The table above has the same format and is based on the same calculation methods as those used internally by If for the valuation of investment operations. The valuation does not include associates. Accrued interest and the investment operations' bank balances are reported above as part of interest-bearing securities. Derivatives and securities settlement claims/liabilities have been reported under the relevant asset category above. The return on active investments has been calculated using a daily time-weighted calculation method. Properties and Other have been calculated using a monthly time-weighted calculation method.

[2] In the asset category Currency (other), the current value of held currency derivatives is presented. The reported return on the same line also includes, in addition to the return from currency derivatives, currency exchange effects recognized in the income statement from the revaluation of items in the income statement and balance sheet.

Other operations

If's subsidiary Viking Assistance Group AS is the Parent Company of the Viking Group (Viking). Viking offers nationwide 24/7 assistance service in all Nordic countries.

The Nordic market for roadside assistance was affected by governmentally introduced mobility restrictions due to the Covid-19 pandemic, as well as weather effects that are normal for this type of operations. Viking's revenue during the year increased to MSEK 1,065 (856) and operating profit was MSEK 56 (19).

Besides Viking, Other operations comprise group-wide operations that If has chosen not to allocate to the Group's established business areas and includes certain parent company costs, adjustments due to reporting of defined-benefit pension plans and interest expenses for the Group's subordinated debt. Other operations also include run-off operations. The technical result for these parts of the operations amounted to MSEK 76 (95).

Rest of EEA	32,518	31,551
Total	**50,244**	**48,824**

Note 8 – Allocated investment income transferred from the non-technical account

The estimated return on the assets that correspond to the technical provisions is transferred from the finance operations (non-technical account) to the technical result. The return is calculated on the basis of net technical provisions. Interest rates corresponding to current discount rates in each country are used for calculating the return on annuities. For other technical provisions, interest rates used in the calculation for each currency match the interest rate for government bonds with a maturity that approximates with the maturity of the technical provisions. Negative interest rates are not used. The transferred investment return is divided into two parts; one part that adds the annuity result by means of a reduction of costs for the upward adjustment of the annuity provision and one part that is reported separately as the allocated investment return.

The following average calculated interest rates have been used for the principal countries/currencies:

	2021		2020	
	Annuities	Other provisions	Annuities	Other provisions
Sweden/SEK	1.2%	0.0%	1.0%	0.0%

[1] Senior executives are defined as the Group Management team, the board members, presidents and vice presidents in the Parent Company and subsidiaries. The amounts for salaries and remuneration also include severance pay of MSEK 2.5 (0.6).

Principles for determining remuneration of senior executives

Remuneration of the CEO and other members of Group Management consist of fixed salary, short-term variable compensation, pension and other benefits. The majority of Group Management is also covered by Sampo Group's long-term incentive schemes. Director fees are not paid to Board members employed in If or other companies within the Sampo Group.

The maximum annual variable compensation payable to the CEO is 75% of the annual fixed salary. The maximum annual variable compensation payable to other members of Group Management entitled to variable compensation is 50-75% of the annual fixed salary. The annual variable compensation is based on the If Group results, business unit results and individual results. For senior executives who are members of the Sampo Group Executive Committee, the annual variable compensation is also based on the Sampo Group results. A substantial part of payments from variable compensation programs is deferred for at least three years. Thereafter, the Board shall evaluate and, if needed, risk adjust the deferred compensation before any payment is made.

1) For more information, refer to Long-term incentive schemes below.

Pensions

In addition to statutory occupational pension benefits, Swedish, Norwegian and Danish members of Group Management are covered by local occupational retirement pension plans. A description of the pension plans can be found below. For more information on pensions, see note 34.

Sweden

Senior executives are covered by individually agreed defined-contribution pension plans or collectively agreed pension according to FTP 1. The annual premium for individual occupational pension is 38% of fixed salary and 25% of paid short-term variable pay. The annual premium for the occupational pension FTP 1 corresponds to
- 5.5% of pensionable salary up to 7.5 income base amounts and
- 31.3% of pensionable salary in excess of 7.5 income base amounts.

The retirement age is flexible. Pension contributions are made until the age of 65 at the most.

Norway

Senior executives are covered by defined-contribution pension plans, with an annual contribution corresponding to
– 7% of pensionable salary up to 7.1 G (G = National Insurance basic amount) and
– 25.1% between 7.1 and 12 G.

For pensionable salary exceeding 12 G, the Norwegian members are covered by a temporary pension between 67 and 82 years of age and the contribution corresponds to 24% of the annual pensionable salary.

The retirement age is flexible. Pension contributions are made until the age of 67 at the most.

Denmark

Senior executives are covered by a defined-contribution pension plan. The contribution corresponds to 22.7% of the annual fixed salary and 25% of paid short-term variable compensation.

The retirement age is flexible. Pension contributions are made until the age of 65 at the most.

Severance pay

If employment is terminated by the company, the CEO will be entitled to compensation during a 12-month period of notice and severance pay amounting to 12 months' fixed salary.

If employment is terminatied by the company, other members of Group Management are entitled to compensation during a period of notice of 6 to 12 months and, in most cases, severance pay amounting to a minimum of 9 months' and a maximum of 24 months' fixed salary.

Long-term incentive schemes

The Board of Directors of Sampo plc has decided on long-term incentive schemes for key employees of Sampo Group. The Board has authorised the Group CEO to decide on the allocation of incentive units, which are used to determine the incentive reward. Some 90 persons were included in the schemes at the end of year 2021.

The amount of the incentive reward is based on the performance of the Sampo A share, If Group's insurance margin (IM) and/or Sampo Group's return on capital at risk (RoCaR). The value of one calculated incentive unit is the trade-weighted average price of the Sampo A share at the time period specified in the terms of the scheme, reduced by the dividend-adjusted starting price. The starting prices of the schemes vary between EUR 32.94 and 44.10. The maximum value of one incentive unit varies between EUR 56.94 and 67,49.

In the 2017:1 scheme, the incentive reward also takes into account the outcome of two performance indicators. If the IM is 6% or more, 60% of the reward is paid. If the IM is 4-5.99%, 30% of the reward is paid. If RoCaR is at least the risk-free return + 4%, 40% of the incentive reward is paid. If RoCaR is the risk-free return + 2%, but less than the risk-free return + 4%, 20% of the incentive reward is paid.

In the 2020:1 scheme, the incentive reward also depends on the RoCAR. If RoCaR is at least the risk-free return + 5%, the reward is paid out in full. If RoCaR is the risk-free return + 3%, but less than the risk-free return + 5%, the pay-out is 50%. If RoCaR is below the risk-free return + 3%, no reward will be paid.

Each plan has three performance periods and incentive rewards are paid in cash in three instalments. Given that the targets have been met, the payment equals the increase in the price of the Sampo A share from the launch of the respective scheme up until each instalment. According to the terms and conditions of the schemes, identified staff must buy Sampo A shares with 50 or 60% of the net reward after taxes and other comparable charges. The shares are subject to a formal disposal restriction for three years from the date of payment. A premature payment of the reward may occur in the event of changes in the group structure.

For further information on the long-term incentive schemes and full terms and conditions, see https://www.sampo.com/governance/remuneration/forms-of-remuneration/long-term-incentives/.

Approvement date		2017-09-14	2017-09-14	2020-08-05	2020-08-05
Initial number of granted unitst		2,607,500	57,000	2,106,500	170,000
End of performance period I 30%		Q2 2020	Q2 2021	Q2 2023	Q2 2024
End of performance period II 35%		Q2 2021	Q2 2022	Q2 2024	Q2 2025
End of performance period III 35%		Q2 2022	Q2 2023	Q2 2025	Q2 2026
Payment I 30%		Sept 2020	Sept 2021	Sept 2023	Sept 2024
Payment II 35%		Sept 2021	Sept 2022	Sept 2024	Sept 2025
Payment III 35%		Sept 2022	Sept 2023	Sept 2025	Sept 2026
Starting price [1] (EUR)		43.81	44.10	32.94	43.49
Maximum prices (EUR)		62.24	62.53	56.94	67.49
Dividend-adjusted starting price as at 31 December 2021 (EUR)		34.59	37.48	32.94	43.49
Sampo A closing price as at 31 December 2021 (EUR)	44.06				

[1] For 2017:1 the starting price is calculated as trade-weighted average for 10 trading days from publication of the half-year result. For 2020:1 the start price is calculated as the trade-weighed average for 25 trading days.

The schemes have been measured at fair value at the grant date and at every reporting date thereafter. The fair value of the schemes has been estimated using the Black-Scholes pricing model. The terms regarding If Group's insurance margin, Sampo Group's return on capital at risk and the number of units that are expected to vest are monitored on an ongoing basis. The provision recognized in the balance sheet is the vested value on the balance sheet date and any changes in the fair value are recognized in profit or loss.

Consolidated goodwill consists of three different items that arose from the acquisition of Sampo's Finnish property and casualty insurance operations in January 2002, acquisition of Vertikal Helseassistanse AS in December 2019 and acquisition of Viking Assistance Group AS in January 2020. As of December 31, 2021, the items amounts to MSEK 715, MSEK 269 and MSEK 919, respectively.

To ensure that those items are not booked at an excessive carrying amount, an impairment test was conducted to determine each item's recoverable amount calculated as the value in use in December 2021. In the calculations for all three items, a cash flow model was used whereby the recoverable amount was set at the present value of future projected cash flows from the operations. As the investments are of a long-term nature, indefinite cash flows were used in the calculations.

The future cash flows for the Finnish property and casualty insurance operations and Vertikal are based primarily on the financial plans for the years 2022-2024, including volumes, premiums and cost development as well as margins. The cash flows for the following years are based on successively normalized results with a combined ratio in the interval of 89-91% (89). Valuations are based on long-term premium growth of 2.0% (2.0), return on investment assets of 2.0% (1.6) and weighted average cost of capital in the interval of 6.8-8.8% (6.1-8.1).

The future cash flows for Viking are based on the financial plans for the years 2022-2024, including volumes, sales and cost development as well as margins. The cash flows for the following years are based on a successively normalized margin of 11-12% based on comparable operations. Valuations are also based on long-term sales growth of 2.0% (2.0) and a weighted average cost of capital 7.6% (7.7).

Weighted average cost of capital (WACC) for all items is calculated in accordance with the Capital Asset Pricing Model (CAPM).

Other intangible assets have predominantly consisted of capitalized costs for the development of the insurance system Waypoint. During the year, If has performed further impairment tests to ensure that the asset is not booked at a value exceeding its recoverable amount. The asset value was subsequently impaired by MSEK 178 (253). The carrying amount is zero and future developments costs are no longer capitalized. The carrying amount of customer relationships attributable to the acquisition of Vertikal has also been written down to zero after an impairment test.

Note 22 – Other financial investment assets and derivative liabilities

Classification of other financial investment assets and derivative liabilities in accordance with IAS 39

The recognition of financial assets and liabilities depends on their classification. The classification of assets and liabilities categorized in accordance with IAS 39 is shown below.

	Acquisition value		Fair value		Carrying amount	
MSEK	2021	2020	2021	2020	2021	2020
Financial assets, mandatory at fair value through profit or loss (trading)						
Derivatives	5	18	176	129	176	129
Financial assets available for sale						
Shares and participations	9,622	9,039	16,977	13,163	16,977	13,163
Bonds and other interest-bearing securities	92,769	92,854	93,420	93,271	93,420	93,271
Total financial assets, at fair value	**102,396**	**101,911**	**110,573**	**106,563**	**110,573**	**106,563**
Loans [1]						
Deposits with credit institutions	-	50	-	50	-	50
Other loans	3,078	1,661	3,079	1,666	3,078	1,661
Total Other financial investment assets	**105,474**	**103,622**	**113,652**	**108,280**	**113,651**	**108,274**
Financial liabilities, mandatory at fair value through profit or loss (trading)						
Derivatives	-	9	78	446	78	446
Total financial liabilities, at fair value	**-**	**9**	**78**	**446**	**78**	**446**

[1] Loans are in accordance with If's application of IAS 39 accounted for at amortized cost. The fair value is only shown for disclosure purposes. Financial instruments with fair value information are classified in three different hierarchy levels depending on their liquidity and valuation methods. All loans are classified in level 3 and the fair value of these loans is based on cash-flow valuations.

Classification of other financial investment assets in accordance with IFRS 9

In accordance with the requirements of IFRS 4, insurance companies that have decided to delay the implementation of IFRS 9 until 2023 must provide certain disclosures regarding fair value and changes in fair values. These disclosures are to be divided into two groups of financial assets.

Since such a grouping presupposes that an assessment of the company's future business model for the administration of financial assets is to be anticipated, If has chosen to assume for this purpose that the business model will be such that nearly all assets are measured at fair value through profit or loss. This does not rule out the possibility that another assessment may be made upon the initial application of IFRS 9.

Based on these circumstances, the following presents the fair value of financial assets at the end of the reporting period and the change in fair value during the period, which according to IFRS 9, have been classified in one of the following categories: financial assets measured at fair value through profit or loss or financial assets measured at amortized cost.

	Fair value		Change in
MSEK	2021	2020	fair value
Financial assets, at fair value through profit or loss			
Shares and participations	16,977	13,163	3,814
Bonds and other interest-bearing securities	93,420	93,271	149
Derivative assets	176	129	47
Total	**110,573**	**106,563**	**4,010**
Financial investment assets at amortized cost			
Deposits with credit institutions	-	50	-50
Other loans	3,079	1,666	1,413
Total	**3,079**	**1,716**	**1,363**
Total financial investment assets	**113,652**	**108,280**	**5,373**

If has only minor holdings in financial investment assets at amortized cost. These holdings are assessed to have a credit rating of between A+ and BB-.

Specification of other financial investment assets and derivative liabilities

Financial investment assets and derivative liabilities at fair value

A careful process is followed and controls are performed in order to ensure correct fair values of financial assets and liabilities. For example, controls are made by several different external sources and assessments of abnormal price changes are performed when necessary.

Different valuation methods are used to determine the fair value depending on the type of financial instruments and to what extent they are traded on active markets. In order to evaluate the activity in a market with respect to frequency and volume If mainly uses information compiled by Bloomberg. Quoted shares are measured on the basis of latest trade price on stock markets and are obtained by Bloomberg. The valuation of bonds is also usually based on prices from Bloomberg. Quoted bonds are measured on the basis of last bid price. For model-valued interest bearing instruments, yield curves based on last mid prices are used.

If's financial instruments, which are measured at fair value, are classified in three different hierarchy levels depending on their valuation methods as well as how active the market is. The control of the classification in hierarchy levels is done quarterly. If conditions have changed for the existing level, the holding in question is moved to the correct hierarchy level in consensus with the Risk Control unit.

Level 1 – Financial assets and liabilities with values based on quoted prices in active markets for identical assets or liabilities.

Quoted prices in active markets are considered the best estimate of an asset/liability's fair value. An active market is typically characterized by quoted prices that are easily and regularly available and that represent actual and regularly occurring transactions at arm's length distance.

Assets and liabilities in the category include shares, listed funds (ETF), equity and interest rate funds and interest bearing assets that have quoted prices in an active market at the time of valuation.

Level 2 – Financial assets and liabilities with values based on quoted prices or valuation based on directly or indirectly observable market data.

In the level 2 hierarchy, all essential inputs are observable either directly or indirectly. The large majority of the instruments in level 2 are traded in a market with daily quoted prices and regularly occurring market transactions but where the market is not considered to be active enough regarding frequency and volume and/or when the standard deviation of the prices is high. A very limited part of the instruments are model-valued with the help of market data that is indirectly observable, meaning that prices can be derived from observable markets where market interest rates and underlying rates normally are updated daily or, in exceptional cases, at least on a monthly basis.

Instruments that are measured at level 2 include interest-bearing assets where the market is not active enough. Most OTC derivatives, standardized derivatives and currency derivatives are also included in this level.

Transfers from level 1 to level 2 amounted to MSEK 3,477 (2,490) corresponding to 3.1% (2.3) of the outstanding balance for financial investment assets measured at fair value, while transfers from level 2 to level 1 amounted to MSEK 5,530 (4,488) corresponding to 5.0% (4.2) of the outstanding balance for financial investment assets measured at fair value.

Level 3 – Financial assets and liabilities that are traded on an illiquid market, with non-observable market data or indications of trading levels without any actual trade.

When neither quoted prices in active markets non-observable market data is available, the fair value of financial instruments is based on valuation techniques that are based on non-observable market data.

Level 3 comprises private equity, unlisted shares and distressed assets encountering financial difficulties where trading has essentially ceased to exist.

The types of financial instruments classified as level 3 in the valuation hierarchy are discussed below with reference to type of securities and valuation method:

- Private equity is classified as level 3. The majority of If's investment in private equity is made in mutual funds. The fair values are based on prices and share values obtained from the funds´ administrators. These quotations are based on the value of the underlying assets in accordance with market practice. The last obtained value is used.
- For some unlisted shares external evaluations are obtained, which are used for valuation. The external valuations are based on models that contain non-observable assumptions.
- Other assets in level 3 are normally measured at least yearly and the valuation is based either on external estimates, cash flow analyses or latest market transactions.

For more information on the valuation of financial instruments, see Note 1.

[1] Mutual equity funds recognized in the above balances totaled MSEK 4,902 (4,193) of which MSEK 4,863 (4,142) was allocated to level 1 and MSEK 39 (51) to level 3.

Financial investment assets in level 3

Financial assets presented in level 3 are included in financial instruments carried at fair value on the balance sheet. At December 31, 2021, the assets presented in level 3 amounted to MSEK 93 (161). These financial assets are categorized as available for sale.

MSEK 2021	Carrying amount Jan 1	Net gains/losses recorded in: income-statement	Net gains/losses recorded in: other comprehensive income	Purchases	Sales/ maturities	Transfers into/out of level 3	Exchange rate differences	Carrying amount Dec 31	Net gains/ losses in income statement that are attributable to assets held at end of period

Sensitivity analysis of the fair values of financial investment assets in level 3

The sensitivity of the fair value of level 3 instruments to changes in key assumptions, by category and financial instrument, is shown below.

The following changes in key assumptions have been used:
– a 1% increase in the yield curve for bonds and other interest-bearing securities.
– a 20% decrease in prices for equity related securities.

MSEK	2021 Carrying amount	2021 Effect of reasonably possible alternative assumptions	2020 Carrying amount	2020 Effect of reasonably possible alternative assumptions
Financial assets, available for sale				
Shares and participations [1]	65	-13	145	-29
Bonds and other interest-bearing securities	28	0	16	-3
Total	**93**	**-13**	**161**	**-32**

[1] Includes holding in equity funds.

Lease contracts where If acts as lessee mainly pertain premises, vehicles and office equipment. Right-of-use assets relate to lease contracts for large office premises and vehicles.

If leases premises and vehicles for its own use. The expected lease term varies from 3 to 13 years for premises and 1 to 5 years for vehicles. Most contracts include an option to extend the contract at the term end. Some lease contracts have an option to terminate the contract before the term end.

Variable lease payments are linked to consumer price indexes.

Expenses during 2020 relating to lease contracts not recognized in the balance sheet amount to MSEK 49 (81).

The total cash outflow for leases amounts to MSEK 296 (322).

For more information on leases, please refer to Note 1 Accounting policies, Note 15 Investment result and Note 37 Other creditors.

Note 29 – Deferred acquisition costs

MSEK	2021	2020
Opening balance	**1,160**	**1,293**
Net change during the year	-39	-67
Translation difference	41	-65
Closing balance	**1,162**	**1,160**

Acquisition expenditure during the year amounted to MSEK 5,408 (5,130). The item pertains to accrued sales costs that have a distinct connection to the writing of insurance contracts. The sales costs include such operating expenses as commission, marketing expenses, salaries and the cost of salespeople, which vary according to, and have a direct or indirect relationship with, the acquisition or renewal of insurance contracts. The sales costs are expensed in a manner that matches the amortization of unearned premiums, normally not more than one year.

Note 30 – Other prepayments and accrued income

MSEK	2021	2020
Accrued income	356	349
Deferred costs	102	86
Total	**458**	**435**

Note 31 – Subordinated debt

				2021		2020	
MSEK	Original nominal value	Maturity	Interest rate	Fair value [1]	Carrying amount	Fair value [1]	Carrying amount
Subordinated loan, issued in 2011	MEUR 110	30 years	6.00%	-	-	1,127	1,102
Subordinated loan, issued in 2016	MSEK 1,500	30 years	3-month STIBOR + 2.25%	-	-	1,503	1,498
Subordinated loan, issued in 2016	MSEK 500	30 years	2.415%	-	-	498	499
Subordinated loan, issued in 2018	MSEK 1,000	perpetual	3-month STIBOR + 2.75%	992	997	998	995
Subordinated loan, issued in 2021	MSEK 1,500	30 years	3-month STIBOR + 1.30%	1,485	1,493	-	-
Total				**2,477**	**2,490**	**4,126**	**4,095**

[1] According to If´s application of IAS 39, subordinated debt is carried at amortized cost. Fair value is only given for disclosure purposes. Financial instruments with fair value information are classified in three different hierarchy levels depending on their liquidity and valuation methods. The subordinated loan issued in 2018 is classified in level 1 and a quoted price in an active market is available. The subordinated loan issued in 2021 is classified in level 2 and fair value is based on quoted prices in inactive markets.

The loan of MEUR 110 was issued in 2011 with fixed interest rate terms for the first ten years. The loan was redeemed on the first call date in December 2021 (ten years after the issue date). Up until redemption, the loan was listed on the Luxembourg Stock Exchange (BdL Market). The loan was approved by the supervisory authority as being utilizable for solvency purposes in If P&C Insurance Ltd (publ).

The loan of MSEK 1,500 was issued in 2016 with variable interest rate terms. The loan was redeemed on the first call date in December 2021 (five years after the issue date). Up until redemption, the loan was listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 500 was issued in 2016 with fixed interest rate terms for the first five years. The loan was redeemed on the first call date in December 2021 (five years after the issue date). Up until redemption, the loan was listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 1,000 was issued in 2018 with variable interest rate terms. The loan includes terms stating the right of redemption after five years and at any interest payment date thereafter. The loan is listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 1,500 was issued in 2021 with variable interest rate terms. The loan includes terms stating the right of redemption after five years, at any date for a three-month period after the first five years and thereafter at any interest payment date. The loan is listed on the Luxembourg Stock Exchange (BdL Market).

Total	**89,300**	**85,785**

Valuation of technical provisions

Technical provisions must reflect the liability If has for its insurance undertakings, meaning the insurance contracts underwritten. This may be divided into two parts: firstly, provisions for unearned premiums and, secondly, provisions for unsettled claims. The provisions for unearned premiums pertain to current contracts for which the contractual period has not expired. The dominant component, provisions for unsettled claims, pertains to future claims payments for the claims associated with all insurance contracts underwritten by If.

Provisions for unearned premiums and unexpired risk

Provisions for unearned premiums correspond to the value of If's aggregate liability for current insurance policies and are calculated using a generally accepted method. This involves taking into consideration how large a share of the premium is attributable to the period following the accounting period. The provision is subsequently tested to ensure it is sufficient to cover anticipated claims and operating expenses. If the provision is deemed to be insufficient, a provision is made for the unexpired risk corresponding to the calculated deficit.

Provisions for unsettled claims

The provisions for unsettled claims correspond to the value of all anticipated claims payments and related claims settlement costs, including those reported to If and those that have probably occurred but not yet been reported.

The provisions for unsettled claims are calculated using statistical methods and/or individual assessment. Usually, the cost of major claims is estimated individually. Minor claims that occur more frequently (frequent claims) as well as the provisions for claims that have yet to be reported are assessed using statistical methods.

Apart from provisions for claims-related annuities and provisions for unknown but probable claims that pertain to annuities, the provisions for unsettled claims are not discounted. Provisions for claims-related annuities are discounted in accordance with current practice, taking into account inflation and mortality.

Description of method

If uses a number of statistical methods to determine the final claims cost that If must pay.

The most common methods are Chain-ladder and Bornhuetter-Ferguson. The Chain-ladder method may be based on various types of data such as outgoing payments, claims costs or the number of claims. Historical claims trend factors and a selection of estimates of future development factors are analyzed. The selection of development factors are subsequently applied to the known costs to date for claims for each claims year (which are not yet fully developed) that is to be estimated. This provides an estimate of the anticipated claims costs for each claims year. The Chain-ladder methodology is most suitable for insurance portfolios that have a relatively stable progression. The method is less applicable in cases that lack sufficient historical data, such as in the case of new insurance products or portfolios with a long lag in claims reporting. In the case of such portfolios, the Bornhuetter-Ferguson method is most frequently used. This is based partly on a combination of claims history and partly on exposure data, such as the numbers of insured parties or premiums written. The actual claims history is given greater weight for older developed claims years while, for more recent years, the known exposure is weighted to a greater degree towards experience from similar portfolios and product areas.

Assumptions and sensitivity

The assumptions and parameters used in determining the provisions to be posted are adjusted each quarter. A more in-depth analysis is implemented on an annual basis.

If is exposed to personal claims arising primarily from obligatory Motor Third Party Liability and Workers' Compensation policies. Of the total claims provision, almost 70% is attributable to these two insurance categories. If issues Motor Third Party Liability insurance in the Nordic region and in the Baltic countries. Workers' Compensation is issued in Norway, Denmark and Finland. From a customer perspective, the scope of the obligatory insurance provided is essentially similar. However, the portion covered by personal insurance and the portion financed through the state social security system differs among the various countries.

There are a number of factors affecting provisions and their uncertainty. The most important assumptions for portfolios dominated by personal claims are:

- inflation;
- discount rate;
- mortality and
- effect of legislative amendments and court practices.

Inflation

The anticipated inflation trend is observed in all provisions but is primarily important in claims settled over a long period of time. For long-term business, such as Motor Third Party Liability and Workers' Compensation, assessments are made in-house regarding the future cost trend. This is based on external assessments of the future inflation trend in various areas, such as the consumer price index and payroll index, combined with If's own evaluation of cost increases for various types of compensation. Compensation costs can rise due to new or amended legislation or practices, for example. Various national rules mean that the sensitivity implications of the assumptions underlying inflation differ quite substantially between countries.

A large share of the claims cost in obligatory insurance consists of compensation for loss of income, which in terms of legislation is usually associated with a pre-defined index for the value adjustments of compensation. In Finland, compensation is paid out in the form of vested annuities and value adjustments are dealt with off the balance sheet in a non-funded pool system. This limits the inflation risk. In Sweden, compensation is also paid out in the form of vested annuities over a long period and provisions must cover future value adjustments. The same also applies to Danish Workers Compensation insurance. This entails substantial sensitivity to changes in inflation.

In Norway and in Danish Motor Third Party Liability insurance, compensation is paid as a lump sum. Since in this case the duration is relatively short, the inflation risk is reduced. Refer to Note 5, Risks and risk management, for a sensitivity analysis of inflation.

Discount rate

With the exception of the claims reserves related to annuities, provisions for claims and premium reserves are presented as nominal values (undiscounted).

The discount interest rate for vested annuities is mainly determined with guidance from the now repealed Swedish Financial Supervisory Authority's regulations and general recommendations on the selection of interest rates for calculating technical provisions (FFFS 2013:23). For the operations conducted in If P&C Insurance Ltd, branch in Finland, however, technical provisions are recognized in accordance with the Finnish Insurance Companies Act. This means that provisions for vested annuities are discounted using a flat interest rate and not the interest-rate curve.

The rates given below are the weighted averages for If's annuities.

The presentation below shows discounted provisions and discount rate by country for countries with significant claims-related annuity portfolios:

MSEK	2021	2020
Denmark		
Amount vested annuities	1,659	1,493
Amount IBNR	44	N/A
Discount rate	0.26%	0.15%
Finland		
Amount vested annuities	15,863	16,037
Amount IBNR	2,586	2,388
Discount rate	0.75%	0.75%
Sweden		
Amount vested annuities	5,465	5,014
Amount IBNR	863	N/A
Discount rate	1.42%	1.01%

Refer to Note 5, Risks and risk management, for a sensitivity analysis of the discount interest rate.

Mortality

The provision risk for mortality is also related to claims-related annuities, since actual mortality may be lower than the mortality assumptions made when assessing the provision. The model used for mortality complies with the practices observed in the various countries. It is usually based on population death rates and/or specific joint-company analyses. The assumptions for mortality are generally differentiated in terms of age and gender. Refer to Note 5, Risks and risk management, for a sensitivity analysis of mortality. In 2021, If changed its mortality model in all countries except Finland from traditional Gompetz-Makeham models to Lee-Miller models (this was already implemented in Finland). The main advantage is that while traditional models use a static population mortality, modern models like Lee-Miller take improved longevity into account. The new mortality models increased the annuity reserve by around MSEK 700, of which MSEK 600 in Sweden.

Effects of legislative amendments and court practices

When setting provisions, it is virtually impossible to take into account amendments to legislation and practices that affect future costs. However, there are methods for managing this uncertainty. Firstly, as noted earlier, the inflation assumptions are adjusted somewhat to take into account historical experience of the various insurance categories. In cases where individual claims issues are subject to legal examination and for which there is a risk of a prejudicial decision that will affect other claims, the provisions for similar claims are adjusted.

Changes in 2021

No significant changes in methods were implemented during the year.

During the year, the reported increase in gross claims provisions amounted to MSEK 2,292. Effects of exchange rate changes amounted to an increase of MSEK 1,778, while the real changes in gross claims reserves adjusted for currency effects amounted to an increase of MSEK 514. The mortality models were changed, which increased the reserves by approximately MSEK 700 on a standalone basis. By geographical area, the major reserve changes were as follows:

- Claims provisons in the Swedish operation, including branches of the Business Area Industrial, decreased by MSEK 466. The largest change was seen in reserves for Motor Third Party Liability insurance, which were reduced by almost MSEK 1,400. Reserves for Property insurance increased by more than MSEK 600 while reserves for Liability insurance and Accident insurance each increased by almost MSEK 300. Reserves for Marine, aviation and transport insurance decreased by almost MSEK 300.
- Claims provisions in the Norwegian operation increased by MSEK 696. Reserves for Property insurance increased by almost MSEK 300 while reserves for Accident insurance increased by around MSEK 400.
- Claims provisions in the Danish operation increased by almost MSEK 270 mostly due to increased reserves for Workers' Compensation insurance and Property insurance.
- Claims provisions in the Finnish operation decreased by MSEK 28. Reserves for Workers' Compensation insurance decreased more than MSEK 300 while reserves for Accident insurance increased over MSEK 100 and reserves for property insurance increased by close to MSEK 200.
- Claims reserves in the Baltic operations increased by MSEK 42 mostly due to increased reserves for Motor insurance.

The reinsured share of the claims provision increased by MSEK 325 in nominal terms. The real change adjusted for currency effects was an increase of MSEK 157. The main driver was a large increase in ceded Property reserves due to many large claims partly offset by less ceded reserves in Marine, aviation and transport insurance.

Significant events

This year's large claims outcome was far worse than expected on a total level. The largest single claim in 2021 was a fire claim at a factory in Tennessee estimated at around MSEK 700.

Claims costs trend

In addition to the sensitivity analysis, prior-year estimates of the claims costs for individual claims years also represent a measure of If´s ability to foresee final claims costs. The tables below show the cost trend for the claims years 2012-2021, before and after reinsurance. For claims years 2011 and earlier, the information is aggregated to one column and includes only payments made after 2002, i.e. the starting point is the closing balance for claims provisions in 2002 as well as the complete claims years 2003-2011.

The upper part of the table shows how an estimate of the total claims costs per claims year evolves annually. The lower section shows how large a share of this is presented in the balance sheet. Since If has operations in various countries, the portfolio is exposed to a number of currencies. To adjust for currency effects, the local reporting currency has been translated to SEK at the closing rate on December 31, 2021. Consequently, the table is not directly comparable with the corresponding tables reported in previous years or with the income statement, since all claims years include translated information and closing rates are used throughout.

Comments

In 2021 If had reinsurance with self-retention of MSEK 250 per event and between MSEK 100 and 250 per risk depending on line of business.

Provisions for fixed claims-related annuities and related payments are included in the distribution by claims year above. Of the total net provision for claims-related annuities of MSEK 23,541, MSEK 17,363 applies to 2011 and previous years.

[2] At the end of 2020, Viking Assistance Group AS and its subsidiaries had tax loss carryforwards of MSEK 177, mainly in Norway, Sweden and Denmark, non of which is subject to expiration dates. Tax assets are recognized for about 75% of the tax losses.

Note 34 – Provision for pensions and similar obligations

MSEK	2021	2020
Defined benefit pension obligations, including social costs etc.	3,012	3,382
Fair value of plan assets	2,745	2,402
Net liability recognized in balance sheet	**267**	**980**

If applies IAS 19 Employee Benefits (issued in 2011) and recognizes defined-benefit pension plans in Sweden and Norway. Other pension plans existing in the Group have either been classified as defined-contribution plans or have been classified as defined-benefit plans but recognized as defined-contribution plans, either because If lacks the information necessary to recognize them as defined-benefit plans or because they have been deemed as insignificant.

For the defined-contribution pension plans, If pays fixed contributions and has no further payment obligations once the contributions have been paid. The pension expense for the defined-contribution plans is equal to the premiums paid by If for the fiscal year.

The main Swedish defined-benefit pension plan, FTP2, is a multi-employer plan and is closed to new employees born in 1972 or later. The main Norwegian defined-benefit pension plan consists solely of active people employed prior to 2006 and born 1957 and earlier.

For both countries, the pension benefits referred to are old-age pension and survivors' pension. A common feature of the defined-benefit plans is that the employees and survivors encompassed by the plans are entitled to a guaranteed pension that depends on the employees' service period and pensionable salary at the time of retirement. The dominating benefit is the old-age pension, referring to a life-long pension after the anticepated retirement age.

All employees in Norway born in 1957 or earlier and who were employed by If in 2013 are entitled to a temporary pension before the anticipated retirement age. The retirement age for receiving early retirement pension is normally 65 years. Following a complete service period the early retirement pension is payable at a rate of 70% of the pensionable salary.

The anticipated retirement age in connection with life-long pension is 65 years for Sweden and 67 years for Norway. In Sweden, life-long old-age pension following a complete service period is payable at a rate of 10% of the pensionable salary between 0 and 7.5 income base amounts, 65% of salary between 7.5 and 20 income base amounts and 32.5% between 20 and 30 income base amounts. In Norway, life-long old-age pension following a complete service period is payable at a rate of 70% of the pensionable salary up to 12 National Insurance base amounts, together with the estimated statutory old-age pension. Paid-up policies and pension payments from the Swedish plans are normally indexed upwards in an amount corresponding to the change in the consumer price index. However, there is no agreement guaranteeing that the value and future supplements in addition to the contractual pension benefit could either rise or fall. If is not responsible for indexation of paid-up policies and/or pension payments from the Norwegian insured plans.

The pensions are primarily funded through insurance whereby the insurers establish the premiums and disburse the benefits. If's obligation is primarily fulfilled through payment of the premiums. Should the assets that are attributable to the pension benefits not be sufficient to enable the insurers to cover the guaranteed pension benefits, If could be forced to pay supplementary insurance premiums or secure the pension obligations in some other way. However, given the insurers' high consolidation ratio, the risk that If will be forced to take any such action is low. In addition to insured pension plans, there are also unfunded pension benefits in Norway for which If is responsible for ongoing payment.

To cover the insured pension benefits, the related capital is managed as part of the insurers' management portfolios. New and existing asset categories are evaluated on an ongoing basis in order to diversify the asset portfolios with a view to optimizing the anticipated risk-adjusted return. Any surplus that arises from management of the assets normally accrues to If and/or the insured and there is no form of transfer of the asset value to other members of the insurance collective.

The insurers and If are jointly responsible for monitoring the pension plans, including investment decisions and contributions. The pension plans are essentially exposed to similar material risks regarding the final amount of the benefits, longevity, the investment risk associated with the plan assets and the fact that the choice of discount interest rate affects the valuation in the financial statements.

When applying IAS 19, the pension obligation and the pension cost attributed to the fiscal period are calculated annually using the Projected Unit Credit method. The calculation of the defined-benefit obligation is based on future expected pension payments and includes yearly updated actuarial assumptions such as salary growth, inflation, mortality and employee turnover. The expected pension payments are then discounted to a present value using a discount rate set with reference to AAA and AA corporate bonds issued in local currency, including mortgage-backed bonds, as at mid-December. The discount rates chosen in Sweden and Norway take into account the duration of the company's pension obligations in each respective country. After a deduction for the plan assets, a net asset or a net liability is recognized in the balance sheet.

The following tables contain a number of material assumptions, specifications of pension costs, assets and liabilities and a sensitivity analysis showing the potential effect on the obligations of reasonable changes in those assumptions as at the end of the fiscal year. The carrying amounts have been stated including special payroll tax in Sweden (24.26%) and a corresponding fee in Norway (14.1%-19.1%).

The subsidiary If P&C Insurance Ltd (publ) provides insurance with mutual undertakings within several pools, such as the Nordic Nuclear Insurers Pool, within the Norwegian Natural Perils Pool and the Dutch Terror Pool.

In connection with the transfer of property and casualty insurance business from the Skandia Group to the If Group, as of March 1, 1999, If P&C Insurance Holding and If P&C Insurance Ltd (publ) issued a guarantee for the benefit of Försäkringsaktiebolaget Skandia (publ), whereby, the aforementioned companies in the If Group mutually guarantee that companies in the Skandia Group will be indemnified against any claims or actions due to guarantees or similar commitments made by companies in the Skandia Group within the property and casualty insurance business transferred to the If Group.

If P&C Insurance Holding and If P&C Insurance Ltd (publ) have separately entered into agreements with Försäkringsaktiebolaget Skandia (publ) and Tryg-Baltica Forsikring AS, whereby, Skandia and Tryg-Baltica will be indemnified against any claims attributable to guarantees issued by Skandia and Vesta Forsikring AS, on behalf of Skandia Marine Insurance Company (UK) Ltd (renamed Marlon Insurance Company Ltd, company dissolved in July 2017), in favor of the Institute of London Underwriters. Marlon was sold during 2007, and the purchaser issued a guarantee in favor of the afore-mentioned companies in the If Group for the full amount that they may be required to pay under these guarantees.

With respect to certain IT systems that If and the Sampo Group use jointly, If P&C Insurance Holding has undertaken to indemnify Sampo plc for any costs caused by If that Sampo plc may incur, in relation to the owners of the IT systems.

If P&C Insurance Ltd (publ) has outstanding commitments to private equity funds totalling MSEK 31, which is the maximum amount that the company has committed to invest in the funds. Capital may be called to these funds over several years as the funds make investments.

Note 42 – Events after the balance sheet date

In February 2022, Russia attacked Ukraine, which has dramatically changed the political situation in Europe and contributed to significant uncertainty in financial markets. If has implemented decided sanctions and follows the development of events closely. Affected insurance exposure is assessed to be low and the financial turbulence can be handled with a continued good solvency situation.

The sensitivity to changes in interest rates, calculated as the effect on the unrealized result of a 1 percentage point shift up of the interest rate, amounted to MSEK -8 (-24) as of December 31, 2021.

The duration of the portfolio was 0,2 (1,0) at year-end 2021.

Short-term investments at fair value

A careful process is followed and controls are performed in order to ensure correct fair values of financial assets and liabilities. For example, controls are made by several different external sources and assessments of abnormal price changes are performed when necessary.

Different valuation methods are used to determine the fair value depending on the type of financial instruments and to what extent they are traded on active markets. In order to evaluate the activity in a market with respect to frequency and volume, If P&C Insurance Holding mainly uses information compiled by Bloomberg. The valuation of bonds is also usually based on prices from Bloomberg. Quoted bonds are measured on the basis of last bid price.

The Company's financial instruments, which are measured at fair value, are classified in three different hierarchy levels depending on their valuation methods as well as how active the market is. The control of the classification in hierarchy levels is done quarterly. If conditions have changed for the existing level, the holding in question is moved to the correct hierarchy level in consent with the Risk Management function.

Level 1 – Financial assets and liabilities with values based on quoted prices in active markets for identical assets or liabilities.

Quoted prices in active markets are considered the best estimate of an asset/liability's fair value. An active market is typically characterized by quoted prices that are easily and regularly available and that represent actual and regularly occurring transactions at arm's length distance.

Assets and liabilities in the category include interest-bearing assets that have quoted prices on an active market at the time of valuation.

Level 2 – Financial assets and liabilities with values based on quoted prices or valuation based on directly or indirectly observable market data.

In the level 2 hierarchy all essential inputs are observable either directly or indirectly. The large majority of the instruments in level 2 are traded in a market with daily quoted prices and regularly occurring market transactions but where the market is not considered to be active enough regarding frequency and volume and/or when the standard deviation of the prices is high.

Instruments that are measured at level 2 include interest-bearing assets where the market is not active enough.

Transfers from level 1 to level 2 amounted to MSEK 8 (40) corresponding to 0.6% (1.6) of the outstanding balance for financial investment assets measured at fair value, while transfers from level 2 to level 1 amounted to MSEK 366 (-) corresponding to 25.9% (-) of the outstanding balance for financial investment assets measured at fair value.

Level 3 - Financial assets and liabilities that are traded on an illiquid market, with non-observable market data or indications of trading levels without any actual trade.

When neither quoted prices in active markets nor observable market data is available, the fair value of financial instruments is based on valuation techniques that are based on non-observable market data.

Short-term investments in fair value hierarchy

	2021				2020			
MSEK	Level 1	Level 2	Level 3	Total fair value	Level 1	Level 2	Level 3	Total fair value

Subordinated loan, issued in 2021	MSEK 1,500	30 years	3-month STIBOR + 1.30%	1,485	1,493	-	-
Total				**2,477**	**2,490**	**2,999**	**2,993**

[1] According to If's application of IAS 39, subordinated debt is carried at amortized cost. Fair value is only given for disclosure purposes. Financial instruments with fair value information are classified in three different hierarchy levels depending on their liquidity and valuation methods. The subordinated loan issued in 2018 is classified in level 1 and a quoted price in an active market is available. The subordinated loan issued in 2021 is classified in level 2 and fair value is based on quoted prices in inactive markets.

The loan of MSEK 1,500 was issued in 2016 with variable interest rate terms. The loan was redeemed on the first call date in December 2021 (five years after the issue date). Up until redemption the loan was listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 500 was issued in 2016 with fixed interest rate terms for the first five years. The loan was redeemed on the first call date in December 2021 (five years after the issue date). Up until redemption the loan was listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 1,000 was issued in 2018 with variable interest rate terms. The loan includes terms stating the right of redemption after five years and at any interest payment date thereafter. The loan is listed on the Luxembourg Stock Exchange (BdL Market).

The loan of MSEK 1,500 was issued in 2021 with variable interest rate terms. The loan includes terms stating the right of redemption after five years, at any date for a three-month period after the first five years and thereafter at any interest payment date. The loan is listed on the Luxembourg Stock Exchange (BdL Market).

Auditor's Report

To the general meeting of the shareholders of If P&C Insurance Holding Ltd (publ), corp. id 556241-7559

Report on the annual accounts and consolidated accounts

Opinions

We have audited the annual accounts and consolidated accounts of If P&C Insurance Holding Ltd (publ) for the financial year 2021-01-01 - 2021-12-31 except for the corporate governance report on pages 6-7. The annual accounts and consolidated accounts of the company are included on pages 4-83 in this document.

In our opinion, the annual accounts have been prepared in accordance with the Annual Accounts Act and present fairly, in all material respects, the financial position of the parent company as of 31 December 2021 and its financial performance and cash flow for the year then ended in accordance with the Annual Accounts Act. The consolidated accounts have been prepared in accordance with the Annual Accounts Act for Insurance Companies and present fairly, in all material respects, the financial position of the group as of 31 December 2021 and their financial performance and cash flow for the year then ended in accordance with International Financial Reporting Standards (IFRS), as adopted by the EU, and the Annual Accounts Act for Insurance Companies. The statutory administration report is consistent with the other parts of the annual accounts and consolidated accounts.

We therefore recommend that the general meeting of shareholders adopts the income statement and balance sheet for the parent company and the group.

Our opinions in this report on the annual accounts and consolidated accounts are consistent with the content of the additional report that has been submitted to the parent company's Board of Directors in accordance with the Audit Regulation (537/2014) Article 11.

Basis for Opinions

We conducted our audit in accordance with International Standards on Auditing (ISA) and generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements. This includes that, based on the best of our knowledge and belief, no prohibited services referred to in the Audit Regulation (537/2014) Article 5.1 have been provided to the audited company or, where applicable, its parent company or its controlled companies within the EU.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

Other information

The audit of the annual accounts and consolidated accounts for the financial year 2020-01-01 - 2020-12-31 has been carried out by another auditor who submitted an auditor's report dated March 4, 2021 with unmodified statements in the Report on the annual accounts and consolidated accounts.

Key Audit Matters

Key audit matters of the audit are those matters that, in our professional judgment, were of most significance in our audit of the annual accounts and consolidated accounts of the current period. These matters were addressed in the context of our audit of, and in forming our opinion thereon, the annual accounts and consolidated accounts as a whole, but we do not provide a separate opinion on these matters.

Provision for claims outstanding

The provision for claims outstanding (gross of reinsurance) amounts to 68 422 MSEK as of 31 December 2021 in the consolidated accounts.

The Group's provision for claims outstanding represents a material balance sheet item and is based on complex actuarial calculations and assumptions about future outcomes, primarily regarding the timing and size of claims incurred. The result of management's assessments regarding the requirement for provision for claims outstanding depends on inputs, the choice of actuarial methods and the precision of management judgment in determining actuarial assumptions. The key areas with the greatest impact on the recorded amount of the provision are assessments of settlement time, inflation, morbidity, mortality (annuity reserve), discount rate and claims settlement cost for attributable cash flows.

Note 1 and Note 2 to the Consolidated Accounts gives a description of the accounting policies applied for the valuation of the Group's claims outstanding and Note 5 deals with the Group's exposure to and management of the insurance risks associated with the provision for unregulated damages. Note 32 further describes the methods applied by the Group in the valuation of the balance sheet item and the development of the provision for claims outstanding over time.

As the calculation of the provision for claims outstanding is significantly dependent on estimations and judgments this is an area of particular importance in our audit.

We have involved actuary specialists in our audit procedures and our audit procedures have included but were not limited to:

- Evaluated whether actuarial valuation methods and models for calculating provision for claims outstanding comply with generally accepted standards and practices.
- Evaluated the key controls deemed most relevant to the assessment of the choice of actuarial methods, assessment of assumptions and evaluation and analysis of historical claims development. We have also evaluated and examined a selection of general IT controls linked to relevant systems and applications assessed as critical to the data that forms the basis for the valuation of provision for claims outstanding.
- On a sample basis, examined input data used in the calculations of the provision for claims outstanding.
- Performed independent calculations based on actuarial methods for a substantial part of the provision for claims outstanding.
- Evaluated management's significant judgments and assumptions.
- Evaluated whether the disclosures, for example regarding methods and assumptions applied, insurance risks and claims development, linked to the provision for claims outstanding are fair and complete based on applicable accounting policies.

Valuation of financial investment assets in level 2 and 3 measured at fair value

The Group's financial investment assets measured at fair value in accordance with the principles set out in IFRS 13 amount to 110 572 MSEK as of December 31, 2021.

The risk associated with the valuation of fair value investment assets is mainly attributable to instruments where quoted prices on an active market are missing (level 2) and/or cannot be derived from observable market data (level 3) through an established valuation technique, which requires management judgment primarily regarding the choice of input data and valuation model.

Note 22 states that the fair value of level 2 financial investment assets amounts to SEK 39,010 million, of which SEK 38,815 million consists of bonds and other interest-bearing instruments as of December 31, 2021. Note 22 also shows that the fair value of level 3 financial investment assets amounts to SEK 93 million as of December 31, 2021.

Note 1 and Note 2 state the accounting policies and the material estimations and judgments considered in connection with the fair value measurement and note 5 deals with the Group's risks and risk management related to financial investment assets. Note 22 further describes the methods the Group applies when valuing financial investment assets.

The Group's financial investment assets form a significant part of the Group's balance sheet and incorrect assessments of, for example, the choice of valuation model may affect the fair value and hence this is an area of particular importance in our audit.

Our audit has included, but was not limited to, the following audit procedures:

- Evaluated the key controls deemed most relevant to the valuation of financial investment assets, including key controls related to estimations and judgments, as well as a selection of general IT controls related to systems and applications deemed critical to the data that underpins the fair value measurement.
- On a sample basis, examined key input data used in the valuation of financial investment assets, including validation of prices, exchange rates and discount curves against external financial data providers and reconciled holdings against custodian depository notices.
- Evaluated valuation methods and models versus generally accepted standards and industry practices.
- Evaluated whether the disclosures for financial investment assets are fair and complete based on applicable accounting policies.

Other information than the annual accounts and consolidated accounts

This document also contains other information than the annual accounts and consolidated accounts and is found on pages 1-3 & 87-89. The Board of Directors and the President are responsible for this other information.

Our opinion on the annual accounts and consolidated accounts does not cover this other information and we do not express any form of assurance conclusion regarding this other information.

In connection with our audit of the annual accounts and consolidated accounts, our responsibility is to read the information identified above and consider whether the information is materially inconsistent with the annual accounts and consolidated accounts. In this procedure we also take into account our knowledge otherwise obtained in the audit and assess whether the information otherwise appears to be materially misstated.

If we, based on the work performed concerning this information, conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors and the President

The Board of Directors and the President are responsible for the preparation of the annual accounts and consolidated accounts and that they give a fair presentation in accordance with the Annual Accounts Act and the Annual Accounts Act for Insurance Companies and, concerning the consolidated accounts, in accordance with IFRS as adopted by the EU. The Board of Directors and the President are also responsible for such internal control as they determine is necessary to enable the preparation of annual accounts and consolidated accounts that are free from material misstatement, whether due to fraud or error.

In preparing the annual accounts and consolidated accounts, The Board of Directors and the President are responsible for the assessment of the company's and the group's ability to continue as a going concern. They disclose, as applicable, matters related to going concern and using the going concern basis of accounting. The going concern basis of accounting is however not applied if the Board of Directors and the President intends to liquidate the company, to cease operations, or have no realistic alternative but to do so.

Auditor's responsibility

Our objectives are to obtain reasonable assurance about whether the annual accounts and consolidated accounts as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with ISAs and generally accepted auditing standards in Sweden will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual accounts and consolidated accounts.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual accounts and consolidated accounts, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinions. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of the company's internal control relevant to our audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors and the President.
- Conclude on the appropriateness of the Board of Directors' and the President's use of the going concern basis of accounting in preparing the annual accounts and consolidated accounts. We also draw a conclusion, based on the audit evidence obtained, as to whether any material uncertainty exists related to events or conditions that may cast significant doubt on the company's and the group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the annual accounts and consolidated accounts or, if such disclosures are inadequate, to modify our opinion about the annual accounts and consolidated accounts. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause a company and a group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the annual accounts and consolidated accounts, including the disclosures, and whether the annual accounts and consolidated accounts represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient and appropriate audit evidence regarding the financial information of the entities or business activities within the group to express an opinion on the consolidated accounts. We are responsible for the direction, supervision, and performance of the group audit. We remain solely responsible for our opinions.

We must inform the Board of Directors of, among other matters, the planned scope and timing of the audit. We must also inform of significant audit findings during our audit, including any significant deficiencies in internal control that we identified.

We must also provide the Board of Directors with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, actions taken to eliminate threats or safeguards applied.

From the matters communicated with the Board of Directors, we determine those matters that were of most significance in the audit of the annual accounts and consolidated accounts, including the most important assessed risks for material misstatement, and are therefore the key audit matters. We describe these matters in the auditor's report unless law or regulation precludes disclosure about the matter.

Report on other legal and regulatory requirements

Opinions

In addition to our audit of the annual accounts and consolidated accounts, we have also audited the administration of the Board of Directors and the President of If P&C Insurance Holding Ltd (publ) for the financial year 2021-01-01 - 2021-12-31 and the proposed appropriations of the company's profit or loss.

We recommend to the general meeting of shareholders that the profit to be appropriated in accordance with the proposal in the statutory administration report and that the members of the Board of Directors and the President be discharged from liability for the financial year.

Basis for Opinions

We conducted the audit in accordance with generally accepted auditing standards in Sweden. Our responsibilities under those standards are further described in the Auditor's Responsibilities section. We are independent of the parent company and the group in accordance with professional ethics for accountants in Sweden and have otherwise fulfilled our ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions.

Responsibilities of the Board of Directors and the President

The Board of Directors is responsible for the proposal for appropriations of the company's profit or loss. At the proposal of a dividend, this includes an assessment of whether the dividend is justifiable considering the requirements which the company's and the group's type of operations, size and risks place on the size of the parent company's and the group's equity, consolidation requirements, liquidity and position in general.

The Board of Directors is responsible for the company's organization and the administration of the company's affairs. This includes among other things continuous assessment of the company's and the group's financial situation and ensuring that the company's organization is designed so that the accounting, management of assets and the company's financial affairs otherwise are controlled in a reassuring manner. The President shall manage the ongoing administration according to the Board of Directors' guidelines and instructions and among other matters take measures that are necessary to fulfill the company's accounting in accordance with law and handle the management of assets in a reassuring manner.

Auditor's responsibility

Our objective concerning the audit of the administration, and thereby our opinion about discharge from liability, is to obtain audit evidence to assess with a reasonable degree of assurance whether any member of the Board of Directors or the President in any material respect:

– has undertaken any action or been guilty of any omission which can give rise to liability to the company, or
– in any other way has acted in contravention of the Companies Act, the Annual Accounts Act and the Annual Accounts Act for Insurance Companies or the Articles of Association.

Our objective concerning the audit of the proposed appropriations of the company's profit or loss, and thereby our opinion about this, is to assess with reasonable degree of assurance whether the proposal is in accordance with the Companies Act.

Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with generally accepted auditing standards in Sweden will always detect actions or omissions that can give rise to liability to the company, or that the proposed appropriations of the company's profit or loss are not in accordance with the Companies Act.

As part of an audit in accordance with generally accepted auditing standards in Sweden, we exercise professional judgment and maintain professional scepticism throughout the audit. The examination of the administration and the proposed appropriations of the company's profit or loss is based primarily on the audit of the accounts. Additional audit procedures performed are based on our professional judgment with starting point in risk and materiality. This means that we focus the examination on such actions, areas and relationships that are material for the operations and where deviations and violations would have particular importance for the company's situation. We examine and test decisions undertaken, support for decisions, actions taken and other circumstances that are relevant to our opinion concerning discharge from liability. As a basis for our opinion on the Board of Directors' proposed appropriations of the company's profit or loss we examined whether the proposal is in accordance with the Companies Act.

The auditor's examination of the corporate governance statement

The Board of Directors is responsible for that the corporate governance statement on pages 6-7 has been prepared in accordance with the Annual Accounts Act.

Our examination of the corporate governance statement is conducted in accordance with FAR´s standard Rev 16 The auditor´s examination of the corporate governance statement. This means that our examination of the corporate governance statement is different and substantially less in scope than an audit conducted in accordance with International Standards on Auditing and generally accepted auditing standards in Sweden. We believe that the examination has provided us with sufficient basis for our opinions.

A corporate governance statement has been prepared. Disclosures in accordance with chapter 6 section 6 the second paragraph points 2-6 of the Annual Accounts Act and chapter 7 section 31 the second paragraph the same law are consistent with the other parts of the annual accounts and consolidated accounts and are in accordance with the Annual Accounts Act.

Deloitte AB, was appointed auditor of If P&C Insurance Holding Ltd by the general meeting of the shareholders on April 6, 2021 and has been the company's auditor since April 6, 2021.

Glossary and definitions

Allocated investment return transferred from the non-technical account
Net return on average technical provisions, with deductions for deferred acquisition costs, the technical result before allocated interest and average outstanding balances. The allocated investment return is based on risk-free interest.

Allocated investment return transferred to the technical account
Allocated investment return transferred from the non-technical account excluding the part added to the annuity result by means of a reduction of costs for the upward adjustment of the annuity provision.

Captive
An insurance company, owned by a non-insurance company, whose principal function is to insure and reinsure part of the parent's risk, or risks of other units within the same group.

Claims frequency
The observed relationship during a specific period between the number of claims and the number of policies in a certain category of insurance (a certain insurance portfolio). Does not include major claims.

Claims ratio
Total sum of claims incurred on own account including claims-adjustment costs in relation to premiums earned, expressed as a percentage.

Combined ratio
Total sum of claims incurred and operating expenses on own account in insurance operations in relation to premiums earned on own account, expressed as a percentage.

Consolidation capital
Shareholders' equity less deferred tax assets plus untaxed reserves, subordinated debt and deferred tax liability.

Consolidation margin
Key ratio representing the relative size of consolidation capital. The consolidation margin is calculated as consolidation capital in relation to premiums written, net excluding portfolio premiums.

Cost of insurance operations
Total sum of operating expenses in insurance operations on own account and claims-adjustment costs.

Cost ratio [1)]
Total sum of operating expenses in insurance operations on own account and claims-adjustment costs in relation to premiums earned on own account, expressed as a percentage.

Direct insurance
Insurance business that relates to contracts concluded between insurers and the insured. The insurance company is directly responsible in relation to the insured.

Direct investment return
Total sum of operating surplus from land and buildings, dividends on shares and participations and interest income.

Duration
The concept of duration has different definitions within the asset management and insurance operations.

Within asset management, duration is the same as the interest-rate risk and denotes how sensitive a fixed-income portfolio is to changes in average interest-rates. Duration may be expressed as number of years, in which case it shows the weighted average maturity of the portfolio, meaning the remaining time until invested capital plus interest is returned to the investor.

Within insurance operations, duration represents the period that starts when an insurance contract becomes effective and ends when it expires.

Economic capital
If uses Economic capital in internal management. It is an internal measure describing the amount of capital required in order to bear different kinds of risk. Economic capital is defined as the amount of capital required to protect the economic solvency over a one-year time horizon with a probability of 99.5%.

Expense ratio
Operating expenses in insurance operations on own account in relation to net premiums earned, expressed as a percentage.

Gross premiums written
Total premiums received during the fiscal year or taken up as a receivable at the end of the year. In contrast to premiums earned, premiums written are not capitalized; i.e. they are unaffected by opening and closing provisions for unearned premiums.

IBNR provision
Provision for the estimated value of the company's liability for claims that have occurred but are unknown or, in view of the extent of the claim, are insufficiently known. The provision is included in Provision for claims outstanding. IBNR = incurred but not reported.

Impact of changes in exchange rates
Changes in amounts and percentages between the current year and the preceding year adjusted for the impact of changes in exchange rates, whereby amounts in foreign currency have been recalculated using the same exchange rates for the particular years.

Insurance margin [1)]
Technical result less other technical income and other operating expense in relation to premiums earned on own account, expressed as a percentage.

Investment assets
Assets that resemble a capital investment, including real estate and securities, such as shares and participations, bonds and other interest-bearing securities, loans and derivatives as well as all investments in group companies and associates.

Investment return
Net of following income and costs: interest income/expense, dividend on shares and participations, surplus/deficits from own properties, management costs, realized and unrealized changes in fair value of real estate, shares and participations and interest-bearing securities, and exchange-rate gains/losses. Return pertaining to associates is not included. If recognizes the main part of unrealized value changes on shares and participations and interest-bearing securities in other comprehensive income.

Net premiums written
Gross premiums written less ceded reinsurance premiums.

Operating expenses in insurance operations
Expenses related to the acquisition or renewal of insurance contracts plus corporate administration costs.

[1)] Refers to alternative performance measurements.

Own funds (capital base) (Solvency II)
In Solvency II, the solvency capital requirements should be covered with "own funds," which consist of capital items and financial resources of a certain quality in terms of ability to absorb losses. An undertaking's available own funds may consist of basic own funds and ancillary own funds. The part of the undertaking's capital which is eligible to cover the solvency and minimum capital requirements is called eligible own funds. An insurance undertaking must have eligible own funds at least equal to the solvency capital requirement (SCR).

Premiums earned
That portion of gross premiums written that pertains to the fiscal year, meaning premiums written adjusted for changes in the provision for unearned premiums.

Prior-year claims result
Profit or loss that arises when claims originating from a prior year are either finally settled or revalued.

Property and casualty insurance
Collective term for property insurance, liability insurance and reinsurance. Property insurance involves the type of insurance that covers the economic value of one or several objects (such as movable property in a home, car, boat, horse, factory building or warehouse). Other types of property and casualty insurance mainly cover various interests (such as, business interruption insurance or liability insurance), where only a specific economic interest is covered, not the economic value of one or several objects.

Provision for unearned premiums and unexpired risks
Liability item in the balance sheet corresponding to the portion of premiums written that, in the financial accounts, pertains to forthcoming periods, and that covers anticipated claims costs and operating expenses for policies in force at the accounting date and up to their next due date.

Provision for claims outstanding
Liability item in the balance sheet consisting of the estimated value of claims incurred but not yet paid and the expected operating expenses for the settlement of the claims.

Reinsurance
A method of distributing risks whereby an insurance company purchases coverage for a part of its liability based on insurance or reinsurance contracts, so-called ceded reinsurance. Reinsurance accepted pertains to the business one insurance company accepts from other insurance companies in the form of reinsurance.

Retention
The highest insured or claims amount relating to the same risk that an insurer retains for its own account, meaning without reinsurance.

Return on equity [1)]
Result for the year, adjusted for unrealized gains and losses on investments assets recognized in other comprehensive income, less full tax in relation to average shareholders' equity.

Risk ratio [1)]
Total sum of insurance claims on own account, excluding claims-adjustment costs, in relation to premiums earned on own account, expressed as a percentage.

Run-off business
The liquidation of an insurance company or portfolio of insurance business that has been transferred to a separate administrative unit.

Solvency Capital Requirement (SCR)
The Solvency Capital Requirement corresponds to a level of eligible own funds that enables an undertaking to absorb significant losses and that provides policyholders and beneficiaries with reasonable certainty to receive their benefits when they fall due. The Solvency Capital Requirement is calculated on the basis of all the quantifiable risks to which the insurance company is exposed. As a minimum, the Solvency Capital Requirement is to cover: insurance risk, market risk, counterparty default risk, and operational risk.

Technical provisions
Provisions for unearned premiums, unexpired risks and claims outstanding.

Technical result
Premiums earned on own account less claims costs and operating expenses on own account, plus the allocated investment return transferred to the technical accounts and other technical income.

Technical result before investment return
Item in the technical accounts comprising premiums earned on own account less claims and operating expenses on own account in the insurance operations.

Total investment return
Investment return in relation to other financial investment assets, land and buildings, cash and bank balances, accrued financial income, securities settlement claims/liabilities and derivative liabilities, expressed as a percentage. The return has been calculated using a daily time-weighted return calculation method.

Underwriting
Includes the risk assessment and pricing conducted when insurance contracts are drawn up. In accounting contexts, the term is also used more broadly to designate the operations of an insurance company that do not have the character of asset management.
